Hi all,

   This is the test for Yocto 1.1 20110613 build. Toolchain tarballs were build failed with this build on autobuilder(bug 1173), so ADT testing is blocked. All the BSPs testing and qemux86-64 testing are blocked because the autobuilder didn't build out them.

Meanwile, this time total found five new bugs, and three were found in sato image, one was about autobuilder. Bug 1171/1172/1174 were found in sato image, to a certain degree bug1174 cause bug1171, Package install/removal will cost lots of disk space, it causes no enough disk space in sato images. And bug 1172 is about the perl command missing, bug1167 is for Mpc8315e-rdb target.
