## 1 Test Suite : Yocto 1.1 M3 Fullpass Test

### 1.1 Test Suite : hob

# Test Case TC-786: hob launch without error

Summary:

hob could be launched without error

Steps:

1. Prepare poky build environment

2. launch hob with command "hob"

3. Check if hob is launched correctly and no error message in console

### Expected Results:

hob launched correctly and no error message

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	Not Run

### Test Case TC-787: package dependency check - acl

Summary:

acl package dependency selection should be correct Steps:

1. launch hob

2. select acl, 3 dependency packages should be shown in "image contents": acl, attr and ncurses 3. deselect acl, package acl should be removed

4. redo step 2,3 and the remaining packages in "image contents" should be consistent with the outputs in step 3

#### Expected Results:

the package list should be always consistent before/after several times package select/deselect

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	Not Run

# Test Case TC-788: package dependency check - avahi&acl

Summary:

avahi and acl package selection should not cause wrong package dependency

### Steps:

- 1. launch hob
- 2. select avahi, a lot of dependency packages should be shown in "image contents"
- 3. select acl, it should be shown in "image contents" also
- 4. deselect avahi, acl, attr and ncurses should not be removed from "image contents"
- 5. deselect acl, it should be removed from "image contents"

4. redo step 2~5 and the remaining packages in "image contents" should be consistent with the outputs in step 5

#### Expected Results:

Package list shown in image contents should be consistent before/after several times acl&avahi selection/deselection

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	Not Run

### Test Case TC-789: base image selection

Summary:

package list should be loaded for "image contents" for each selection in "base image" field Steps:

1. launch hob

- 2. select one "Machine", for example, qemumips
   3. select one image for "Base image", for example, "core-image-basic"
- 4. a list of packages should be loaded for "image contents"

Expected Results:

package list should be loaded for "image contents" for each selection in "base image" field

Last Result	Not Run
Feature:	hob
Case State:	Ready
Case Automation Type:	Manual
Test Execution Cycle Type:	Weekly

# Test Case TC-790: package list re-load for "base image" change

Summary:

package list should be re-loaded if changing image type for "base image" Steps:

1. launch hob

- select one "Machine", for example, qemumips
   select one image for "Base image", for example, "core-image-basic"
- 4. a list of packages should be loaded for "image contents"

5. change the image type for "image contents", for example, "core-image-minimal", the list of packages should be re-loaded

#### Expected Results:

package list should be re-loaded if changing image type for "base image"	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	Not Run

### Test Case TC-794: package list re-load for "Machine" change

Summary:

package list for "image contents" should be re-loaded and correct when "Machine" changing Steps:

1. launch hob

- select one "Machine", for example, qemuppc
   select one image for "Base image", for example, "core-image-sato"
- 4. a list of packages should be loaded for "image contents"
- 5. select another machine type for "Machine", for example, beagleboard
- 6. a new list of packages should be re-loaded for "image contents" and should not same as the outputs in step 4

Expected Results:

package list for "image contents" should be re-loaded and correct when "Machine" changing

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	Not Run

### Test Case TC-913: package list re-load correct for "Machine" change Summary:

package list re-load correct for "Machine" change Steps:

1. launch hob

2. check the default value of "Machine", for example, qemux86, then choose a value for "base image", for example, "core-image-sato", write down the package number for the image 3. choose another value for "Machine", for example, beagleboard and choose the same value for "base image" as for qemux86, the pakcage number for beagleboard should not same as qemux86

### Expected Results:

Different machine/image should have different package list

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual

Case State:	Ready
Feature:	hob
Last Result	Not Run

### Test Case TC-791: package list reset Summary: reset button should clear package list for "image contents" Steps: 1. launch hob 2. select one "Machine", for example, gemumips select one image for "Base image", for example, "core-image-basic" a list of packages should be loaded for "image contents" 5. click "reset" button, all packages should be cleared for "image contents" Expected Results: reset button should clear package list for "image contents" **Test Execution** Weekly Cycle Type: **Case Automation** Manual Type: Case State: Ready Feature: hob Last Result Not Run

### Test Case TC-792: customized package list save as bb file(add packages) Summary: user could use "save" or "save as" button to save customized bb file Steps: 1. launch hob select one "Machine", for example, qemumips select one image for "Base image", for example, "core-image-basic" 4. a list of packages should be loaded for "image contents" 5. select some un-selected package, for example, acpid 6. click "File"->"Save" or "Save As", it should save the user customized package list into a bb file 7. click "reset" button, and click "File"->"Open", choose the saved bb file 8. The user customized package list should be shown Expected Results: user could use "save" or "save as" button to save customized bb file Test Execution Weekly Cycle Type: **Case Automation** Manual Type: Case State: Ready Feature: hob Last Result Not Run

Test Case TC-914: customized package list save as bb file(remove packages)		
Summary:		
user could use "say	ve" or "save as" button to save customized bb file	
Steps:		
<ol> <li>select one image</li> <li>a list of packages</li> <li>deselect some ui</li> <li>click "File"-&gt;"Sav</li> <li>click "reset" butto</li> </ol>	nine", for example, qemumips for "Base image", for example, "core-image-basic" s should be loaded for "image contents" n-selected package, for example, zypper re" or "Save As", it should save the user customized package list into a bb file on, and click "File"->"Open", choose the saved bb file ized package list should be shown	
Expected Results:		
user could use "sav	ve" or "save as" button to save customized bb file	
Test Execution Cycle Type:	Weekly	
Case Automation Type:	Manual	
Case State:	Ready	
Feature:	hob	
Last Result	Not Run	

Test Case TC-795	: cancel customized package list save action
Summary:	
cancel customized	package list save action should not cause any error
<u>Steps:</u>	
<ol> <li>select one image</li> <li>a list of package</li> <li>select some un-s</li> <li>click "x" button, a</li> </ol>	hine", for example, qemux86-64 e for "Base image", for example, "core-image-minimal" s should be loaded for "image contents" selected package, for example, acpid a dialog should pop up and ask user if customiszations wants be saved. lick "cancel" in next page without error log
Expected Results:	
No error log with h	ob exit when cancel customized package list save action
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	Not Run

### Test Case TC-796: No native package shown in package list Summary:

There should be no native package shown in package list

### Steps:

<u>Dieps.</u>		
<ol> <li>launch hob</li> <li>check if there is</li> </ol>	1. launch hob 2. check if there is any -native package in "Packages"	
Expected Results:	Expected Results:	
There should be no native package shown in package list		
Test Execution Cycle Type:	Weekly	
Case Automation Type:	Manual	
Case State:	Ready	
Feature:	hob	
Last Result	Not Run	

### Test Case TC-798: stop build during image/package building Summary: "stop build" button should be able to stop/force stop building Steps: 1. launch hob select one "Machine", for example, qemuarm select one image for "Base image", for example, "core-image-sato" a list of packages should be loaded for "image contents" select some un-selected package, for example, acpid 6. click "bake" button to start build 7. in building page, click "stop build", and click "stop" or "force stop" to stop building Expected Results: "stop build" button should be able to stop/force stop building **Test Execution** Weekly Cycle Type: Case Automation Manual Type: Case State: Ready Feature: hob Last Result Not Run

Test Case TC-799:	Test Case TC-799: search package name in package list		
Summary:	Summary:		
User could search p	ackage name from "Search packages"		
Steps:			
1. launch hob			
	kage via "search packages", for example, avahi		
3. the searched package should be shown in "packages"			
Expected Results:			
User could search package name from "Search packages"			
Test Execution	Waakky		
Cycle Type:	Weekly		

Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	Not Run

# Test Case TC-800: task list re-load when base image change

### Summary:

task list for "package collections" should be re-loaded when base image changing Steps:

1. launch hob

2. select one "Machine", for example, qemuppc

3. select one image for "Base image", for example, "core-image-sato"

4. a list of packages should be loaded for "image contents" and you could find some tasks are select for "package collections"

5. select another image type for "base image", for example, beagleboard 6. a new list of tasks should be re-loaded

Expected Results:

task list for "package collections" should be re-loaded when base image changing

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	Not Run

# Test Case TC-806: user could customize threads of bitbake and make

Summary:

user could customize threads of bitbake and make in hob

Steps:

1. launch hob

2. select one "Machine", for example, qemux86

3. select one image for "Base image", for example, "core-image-basic"

4. a list of packages should be loaded for "image contents" and you could find some tasks are

select for "package collections" 5. click Edit->Preferences, and customize number for "bitbake threads" and "make threads", for example, you could set both 1 for them

6. click "bake" and check 'ps' command output if there is one thread running

Expected Results:

user could customize threads of bitbake and make in hob

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	Not Run

### Test Case TC-807: add layer for new target build

### Summary:

user could add layer for new target build

#### Steps:

1. launch hob

2. click File->Add Layer, then choose one layer, for example, you could download meta-intel.git and use sugarbay

3. check "Machine" list and sugarbay should be available

4. Meanwhile, -live image should be available in "base image", choose one type, for example, coreimage-sato-sdk

5. click "bake" and check the build result

### Expected Results:

user could add layer for new target build

Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	Not Run

Test Case TC-810: another build after stop build		
Summary:		
user could start another build after stop a build		
<u>Steps:</u>		
<ol> <li>3. select one image</li> <li>4. a list of package</li> <li>5. select some un-select some u</li></ol>	hine", for example, qemuarm e for "Base image", for example, "core-image-sato" s should be loaded for "image contents" selected package, for example, acpid on to start build click "stop build", and click "stop" to stop building n UI, and select another image, then click "bake" button I finished and it should be no error met	
Expected Results:		
user could start another build after stop a build		
Test Execution Cycle Type:	Weekly	
Case Automation Type:	Manual	
Case State:	Ready	
Feature:	hob	
Last Result	Not Run	

Test Case TC-917: back to main UI after back stopped	
Summary:	

should bake to main UI after bake stopped
ine", for example, qemuarm for "Base image", for example, "core-image-sato" s should be loaded for "image contents" elected package, for example, acpid n to start build click "stop" or "force stop" n, it should return to main UI
should bake to main UI after bake stopped
Weekly

Cycle Type:	V CONY
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	Not Run

### Test Case TC-919: customized preference items save in local.conf

### Summary:

user customized items should be saved in local.conf or hob.local.conf

### Steps:

1. launch hob

- 2. select one "Machine", for example, qemumips
   3. select one image for "Base image", for example, "core-image-basic"
- 4. a list of packages should be loaded for "image contents"
- 5. select some un-selected package, for example, acpid

6. click "Edit"->"Preferences", change the value of all items in this page, for example, changing "poky" to "poky bleeding" for "distribution", selecting "GPLv3", "rpm" for "package format", "3", "4" for "bitbake threads" and "Make threads" and enable toolchain build, setting "x86\_64" for

"Toolchain host"

6. exit hob

7. check local.conf, above modifications should be set in it

8. re-launch hob and check "Preferences", all above modifications should be set in this page

Expected Results:

user customized items should be saved in local.conf or hob.local.conf

Last Result	Not Run
Feature:	hob
Case State:	Ready
Case Automation Type:	Manual
Test Execution Cycle Type:	Weekly

### Test Case TC-793: bake a image without error (base image) Summary:

user could use hob to build a image without error

Steps:

- 1. launch hob
- select one "Machine", for example, qemumips
   select one image for "Base image", for example, "core-image-basic"
- 4. a list of packages should be loaded for "image contents"
- 5. click "Bake" and wait for a successful build finished

### Expected Results:

user could use hob to build a image without error	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	Not Run

Test Case TC-915: bake a image without error (added package)	
Summary:	
user could use bob	to build a image without error
Steps:	
<ol> <li>select one image</li> <li>a list of package</li> <li>select some un-s</li> <li>click "Bake" and</li> </ol>	nine", for example, qemumips e for "Base image", for example, "core-image-basic" s should be loaded for "image contents" selected package, for example, acpid wait for a successful build finished ed, check if the added package built into image
Expected Results: user could use hob	to build a image without error
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob

### Test Case TC-916: bake a image without error (remove packages)

#### Summary:

user could use hob to build a image without error Steps:

1. launch hob

- adicionational
   adicional
   select one "Machine", for example, qemumips
   select one image for "Base image", for example, "core-image-basic"
   a list of packages should be loaded for "image contents"

5. deselect some un-selected package, for example, zypper 6. click "Bake" and wait for a successful build finished 7. after build finished, check if the removed package not built into package	
Expected Results:	
user could use hob to build a image without error	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	Not Run

Test Case TC-797: back to main UI after bake finished		
Summary:		
click "back" button	should bake to main UI after bake finished	
<u>Steps:</u>	Steps:	
<ol> <li>launch hob</li> <li>select one "Machine", for example, qemuarm</li> <li>select one image for "Base image", for example, "core-image-sato"</li> <li>a list of packages should be loaded for "image contents"</li> <li>select some un-selected package, for example, acpid</li> <li>click "bake" button to start build</li> <li>in bake page, wait for build finished</li> <li>click "back" button, it should return to main UI</li> </ol>		
Expected Results:		
click "back" button should bake to main UI after bake finished		
Test Execution Cycle Type:	Fullpass	
Case Automation Type:	Manual	
Case State:	Ready	
Feature:	hob	
Last Result	Not Run	

Test Case TC-809: toolchain built correct with user customization
Summary:
toolchain generated correct with user selection
Steps:
1 Jaunch hob
2. select one "Machine", for example, beagleboard
3. select one image for "Base image", for example, "core-image-sato"
4. a list of packages should be loaded for "image contents" and you could find some tasks are
select for "package collections"
5. click Edit->Preferences, and select "Build external development toolchain with image", for
"toolchain host", you could pick one and choose one arch for "toolchain host", for example, x86_64
6. click "bake" button and it should generate toolchain as well as selected packages/images
7. check the generated toolchain tarball, the name should be consistent with the above selection,

for example, x86\_64 for host name, arm for beagleboard

8. use the toolchain to build a C program and make sure it workable in target			
Expected Results:			
toolchain generated correct with user selection			
Test Execution Cycle Type:	Fullpass		
Case Automation Type:	Manual		
Case State:	Ready		
Feature:	hob		
Last Result	Not Run		

### Test Case TC-801: non-GPLv3 build Summary: non-GPLv3 build should be supported for hob Steps: 1. launch hob 2. select one "Machine", for example, qemux86 3. select one image for "Base image", for example, "core-image-basic" 4. a list of packages should be loaded for "image contents" and you could find some tasks are select for "package collections" 5. click Edit->Preferences, and select "Exclude GPLv3 packages" 6. click "bake" to build a non-GPLv3 image 7. After build is finished, check if there is any GPLv3 packages built in Expected Results: non-GPLv3 build should be supported for hob Test Execution Fullpass Cycle Type: Case Automation Manual Type: Case State: Ready Feature: hob Last Result Not Run

Test Case TC-804:	Test Case TC-804: distribution selection for image/package build	
Summary:		
user could select di	fferent distribution for "distribution"	
<u>Steps:</u>		
1. launch hob		
2. select one "Mach	2. select one "Machine", for example, gemux86	
	for "Base image", for example, "core-image-basic"	
	4. a list of packages should be loaded for "image contents" and you could find some tasks are	
1 0	select for "package collections"	
5. click Edit->Preferences, and select different distribution for "distribution", for example, poky-lsb 6. click "bake" button and it should generate packages or image with selected distribution		
Expected Results:		
user could select dit	fferent distribution for "distribution"	
Test Execution	Fullpass	

Cycle Type:	
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	Not Run

### Test Case TC-802: ipk package build for image/package build Summary:

build image with ipk package format

Steps:

1. launch hob

autor nob
 autor nob
 select one "Machine", for example, qemux86
 select one image for "Base image", for example, "core-image-basic"
 a list of packages should be loaded for "image contents" and you could find some tasks are

select for "package collections" 5. click Edit->Preferences, and select ipk for "package format"

6. click "bake" button and it should generate images with ipk format

Expected Results:

build image with ipk package format

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	Not Run

Test Case TC-803	Test Case TC-803: deb package build for image/package build	
Summary:		
build image with de	eb package format	
Steps:	Steps:	
<ol> <li>launch hob</li> <li>select one "Machine", for example, qemux86</li> <li>select one image for "Base image", for example, "core-image-basic"</li> <li>a list of packages should be loaded for "image contents" and you could find some tasks are select for "package collections"</li> <li>click Edit-&gt;Preferences, and select deb for "package format"</li> <li>click "bake" button and it should generate images with dformat</li> </ol>		
Expected Results:		
Test Execution Cycle Type:	Fullpass	
Case Automation Type:	Manual	
Case State:	Ready	
Feature:	hob	

Test Case TC-918	Test Case TC-918: rpm package build for image/package build	
Summary:	Summary:	
build image with rp	m package format	
<u>Steps:</u>	Steps:	
<ol> <li>launch hob</li> <li>select one "Machine", for example, qemux86</li> <li>select one image for "Base image", for example, "core-image-basic"</li> <li>a list of packages should be loaded for "image contents" and you could find some tasks are select for "package collections"</li> <li>click Edit-&gt;Preferences, and select rpm for "package format"</li> <li>click "bake" button and it should generate images with rpm format</li> </ol>		
Expected Results: build image with rp	m package format	
Test Execution Cycle Type:	Fullpass	
Case Automation Type:	Manual	
Case State:	Ready	
Feature:	hob	
Last Result	Not Run	

# 1.2 Test Suite : System & Core OS

Test Case TC-811:	Test Case TC-811: zypper command installed and workable	
Summary:		
check if zypper is ir	check if zypper is installed and can work	
Steps:		
1. Run command "zypper", and check the output		
Expected Results:		
Command "zypper" print the list of available global options and commands		
Test Execution Cycle Type:	Sanity	
Case Automation Type:	Auto	
Case State:	Ready	
Feature:	system usage	
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest	
image profile:	sato, sato-sdk, lsb-sdk	
Last Result	Not Run	

Test Case TC-812	zypper help search	
Summary:		
check help option v	vith zypper command	
<u>Steps:</u>		
1. Run "zypper help	1. Run "zypper help search" and check the output	
Expected Results:		
The command shou	uld print help for the search command	
Test Execution Cycle Type:	Sanity	
Case Automation Type:	Auto	
Case State:	Ready	
Feature:	system usage	
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest	
image profile:	sato, sato-sdk, lsb-sdk	
Last Result	Not Run	

Test Case TC-813: zypper search package		
Summary:		
search package wit	h zypper	
Steps:		
1. Run "zypper sea	1. Run "zypper search package_name" and check the output, for example "zypper search avahi"	
Expected Results:		
The command shou	uld search package "avahi" is installed or not	
Test Execution Cycle Type:	Weekly	
Case Automation Type:	Auto	
Case State:	Ready	
Feature:	system usage	
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest	
image profile:	sato, sato-sdk, lsb-sdk	
Last Result	Not Run	

Test Case TC-814: zypper remove package
Summary:
remove package with zypper
<u>Steps:</u>
1. Run "zypper rm pakcage_name" and check the output, for example "zypper rm avahi"

Expected Results:		
The command should remove package "avahi"		
Test Execution Cycle Type:	Weekly	
Case Automation Type:	Manual	
Case State:	Ready	
Feature:	system usage	
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest	
image profile:	sato, sato-sdk, lsb-sdk	
Last Result	Not Run	

# Test Case TC-815: zypper install package

Summary:

install package with zypper

Steps:

1. Set up a yum based repository on local server

2. Build out a package, which does not need any run-time dependency package, with local poky tree. For example, package "man"

3. In target system, run "zypper addrepo http://ip\_address\_of\_repository zypper\_test\_repo"

4. Run "zypper refresh" to refresh the zypper repository cache

5. Run "zypper install package\_name" and check the output, for example "zypper install man" to install package, which has no run-time dependency

### Expected Results:

The command should install package "man"

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	Not Run

### Test Case TC-816: zypper install dependency package

Summary:

install dependency package with zypper Steps: 1. Set up a yum based repository on local server

2. Build out a package, which does not need any run-time dependency package, with local poky tree. For example, package "mc"

3. In target system, run "zypper addrepo http://ip\_address\_of\_repository zypper\_test\_repo"

4. Run "zypper refresh" to refresh the zypper repository cache

5. Run "zypper install package\_name" and check the output, for example "zypper install mc" to install package, which needs run-time dependency packages installed also, like ncurses-terminfo. <u>Expected Results:</u>

Expedied Neodilo.

The command should install package "mc" and denpendency package ncurses-terminfo.

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	Not Run

### Test Case TC-817: zypper install .all packages

Summary:

install packages from all folder with zypper

Steps:

1. Set up a yum based repository on local server

2. Build out a package, which belongs to all folder, for example, xcursor-transparent-theme-dbg-0.1.1-r3.all.rpm.

3. In target system, run "zypper addrepo http://ip\_address\_of\_repository zypper\_test\_repo"

4. Run "zypper refresh" to refresh the zypper repository cache

5. Run "zypper install xcursor-transparent-theme-dbg" and check the output

Expected Results:

package install from all folder should be installed successfully with zypper

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	Not Run

Summary:

make sure rootfs image is built with rpm packages

Steps:

1. launch terminal

2. run command "rpm -qa", which lists all existing packages in system Expected Results:

"rpm -qa" should print all existing packages in system

	51 5 5
Test Execution Cycle Type:	Sanity
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	Not Run

### Test Case TC-819: rpm install package

Summary:

rpm format package can be installed <u>Steps:</u>

1. Get a RPM package(for example, avahi or powertop) from zypper repository or build one on local machine

2. Copy the package into image, run command "rpm -ivh package\_name" to install the package <u>Expected Results:</u>

RPM format package can be installed

The monthal package can be installed	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	Not Run

# Test Case TC-820: rpm install dependency package

Summary:

rpm command should report dependency when installing package

### Steps:

1. Get a RPM package or build one on local machine, which should have run-time dependency. For example, mc RPM should depends on ncurses-terminfo

2. Run "rpm -ivh package\_name" and check the output, for example "rpm -ivh mc.rpm\*" should report the dependency on ncurses-terminfo

### Expected Results:

rpm command should report message when some RPM installation depends on other packages

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	Not Run

Test Case TC-821	: rpm remove package
<u>Summary:</u>	
rpm command car	remove package in system
Steps:	
1. Launch terminal example, avahi	and run command "rpm -e package_name" to remove some package, for
Expected Results:	
RPM package can	be removed by command rpm
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk

### Test Case TC-909: check rpm install/removal log file size

#### Summary:

Last Result

The case is to track log file size after rpm install/removal

Not Run

Steps:

1. After system is up, check the log file size after rpm/zypper install/removal

2. for rpm, there will be some database files under /var/lib/rpm/, named as "\_\_db.xxx" and there will

be some log files under /var/lib/rpm/log, named as "log.xxxxx". Each file will occupy about 10MB. 3. after several rpm/zypper install/removal, rpm will create several log files under /var/lib/rpm/log, which eat lots of system disk space.

### Expected Results:

there should be some method to keep rpm log in a small size	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips
image profile:	sato, sato-sdk
Last Result	Not Run

Test Case TC-822: boot and install from USB	
Summary:	
boot and install ima	age from usb stick
<u>Steps:</u>	
<ol> <li>configure device</li> <li>boot the device</li> <li>proceed through</li> </ol>	n contains live image burned BIOS to firstly boot from USB if necessary and select some option like "Boot and Install" from boot menu default install process nd reboot into new installed system.
Expected Results:	
1. User can choose option 2. Imstalled system	e install system from usb stick onto harddisk from boot menu or command line n can boot up
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	installation&boot
target:	e-menlow, blacksand, crownbay, sugarbay, jasperforest
	sato, sato-sdk, lsb-sdk
image profile:	Salo, Salo-Suk, ISD-Suk

 Test Case TC-823: live boot from USB

 Summary:

 live boot from USB

 Steps:

 boot live image from usb stick

 1. plugin usb which contains live image burned

 2. configure device BIOS to firstly boot from USB if necessary

 3. boot the device and select some option like "boot from usb" from boot menu

 Expected Results:

<ol> <li>User can choose boot from live image on usb stick from boot menu or command line option</li> <li>Live image can boot up with usb stick</li> </ol>	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	installation&boot
target:	e-menlow, blacksand, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	Not Run

### Test Case TC-824: boot from runlevel 3 Summary: Verify that system can boot from runlevel 3 Steps: 1. Boot into system and edit /etc/inittab to make sure system enter init 3 by default ######## id:3:initdefault ######## reboot system, and press Tab to enter "grub" edit "kernel" line and add "psplash=false text" at the end Press "enter" to boot system Expected Results: system should boot to runlevel 3. **Test Execution** Weekly Cycle Type: Case Automation Manual Type: Case State: Ready Feature: installation&boot target: e-menlow, blacksand, crownbay, sugarbay, jasperforest image profile: sato, sato-sdk, lsb-sdk Last Result Not Run

Test Case TC-825: boot from runlevel 5
Summary:
Verify that system can boot from runlevel 5
Steps:
1. Boot into system and edit /etc/inittab to make sure system enter init 5 by default

#### ########

id:5:initdefault

#### ########

2. reboot system, and press Tab to enter "grub"

- 3. edit "kernel" line and make sure no "psplash=false text" in grub cmdline
- 4. Press "enter" to boot system

Note: The test is only for sato image.

Expected Results:

system should boot to runlevel 5.

,	,	
Test Execution Cycle Type:	Weekly	
Case Automation Type:	Manual	
Case State:	Ready	
Feature:	installation&boot	
target:	e-menlow, blacksand, crownbay, sugarbay, jasperforest	
image profile:	sato, sato-sdk	
Last Result	Not Run	

### Test Case TC-826: g++ compile in sdk image

Summary:

check if g++ can compile program in sdk image

Steps:

- 1. Boot up sdk image
- 2. check if g++ is built in
- 3. compile following program test.c "g++ test.c -o test -lm"

4. run "test" and check the output

double convert(long long l)

{ return (double)I; // or double(I) }

int

main(int argc, char \* argv[])
{

long long I = 10; double f;

f = convert(I); printf("convert: %IId => %f\n", I, f);

f = 1234.67; printf("floorf(%f) = %f\n", f, floorf(f));

return 0; } ###########	
Expected Results:	
executable binary t	est can run without problem
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	sdk
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato-sdk, lsb-sdk
Last Result	Not Run

Test Case TC-827: gcc compile in sdk image
Summary:
check if gcc can compile program in sdk image
Steps:
<ol> <li>Boot up sdk image</li> <li>check if gcc is built in</li> <li>compile following program test.c "gcc test.c -o test -lm"</li> <li>run "test" and check the output</li> </ol>
test.c: ############ #include <stdio.h> #include <math.h></math.h></stdio.h>
double convert(long long I) {
return (double)I; // or double(I) }
int main(int argc, char * argv[]) {
long long l = 10; double f;
f = convert(l); printf("convert: %lld => %f\n", l, f);
f = 1234.67; printf("floorf(%f) = %f\n", f, floorf(f)); return 0;
} ###########
Expected Results:
executable binary test can run without problem
Test Execution Cycle Type: Weekly

Case Automation Type:	Manual
Case State:	Ready
Feature:	sdk
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato-sdk, lsb-sdk
Last Result	Not Run

Test Case TC-828	: run command make in sdk image	
Summary:		
abook if command	make can watk in adk image	
	make can work in sdk image	
<u>Steps:</u>		
1. Boot up sdk ima 2. check if make is 3. run command "n sdk image"		
test: test.o		
gcc -o test tes	st.o -lm	
test.o: test.c		
gcc -c test.c	gcc -c test.c	
Expected Results:		
make command ca	n work without problem	
Test Execution Cycle Type:	Weekly	
Case Automation Type:	Manual	
Case State:	Ready	
Feature:	sdk	
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest	
image profile:	sato-sdk, lsb-sdk	
Last Result	Not Run	

# Test Case TC-829: cvs project compile in sdk image

Summary:

cvs project could be compiled in sdk image

Steps:

- 1. Download cvs project from http://ftp.gnu.org/non-gnu/cvs/source/feature/1.12.13/cvs-1.12.13.tar.bz2

- Copy cvs tarball into sdk image
   Extract the tarball and do "configure", "make" and "make install"

Expected Results:

cvs project could be compiled successfully	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	sdk
target:	e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato-sdk, lsb-sdk
Last Result	Not Run

### Test Case TC-830: iptables project compile in sdk image

### Summary:

iptables project could be compiled in sdk image Steps:

1. Download iptables project from http://netfilter.org/projects/iptables/files/iptables-1.4.11.tar.bz2

Copy iptables tarball into sdk image
 Extract the tarball and do "configure", "make" and "make install"

### Expected Results:

iptables could be compiled successfully

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	sdk
target:	e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato-sdk, lsb-sdk
Last Result	Not Run

Test Case TC-831:	sudoku-savant project compile in sdk image
Summary:	
sudoku-savant coul	d be compiled in sdk image
savant/sudoku-sava 2. Copy sudoku-sav	u-savant project from http://downloads.sourceforge.net/project/sudoku- nt/sudoku-savant-1.3/sudoku-savant-1.3.tar.bz2 ant tarball into sdk image I and do "configure", "make"
Expected Results: sudoku-savant could	d be compiled successfully
Test Execution Cycle Type:	Weekly

Case Automation Type:	Manual
Case State:	Ready
Feature:	sdk
target:	e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato-sdk, lsb-sdk
Last Result	Not Run

### Test Case TC-832: perl program work in image

### Summary:

A perl program could be executed and output correctly in image <u>Steps:</u>

Check if perl is installed in image and could run with "perl -v"
 Prepare a perl program like followig test.pl
 Run "perl test.pl"

######### \$a = 9.01e+21 + 0.01 - 9.01e+21; print ("the value of a is ", \$a, "\n");

\$a = 9.01e+21 - 9.01e+21 + 0.01; print ("the value of a is ", \$a, "\n"); #########

Expected Results:

The test.pl could run without problem

Test Execution Cycle Type:	Weekly
Case Automation Type:	Auto
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	Not Run

Test Case TC-833: shutdown system
Summary:
verify that system can be shutdown by command
Steps:
1. boot system
2. launch terminal and run "shutdown -h now" or "poweroff"
Expected Results:
System can be shutdown successfully

Test Execution Cycle Type:	Sanity
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, mpc8315e-rdb, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	Not Run

Test Case TC-834	Test Case TC-834: reboot system	
Summary:	Summary:	
vorify that avatam	has beet by command	
	an boot by command	
Steps:		
1. boot system		
2. launch terminal a	and run "reboot"	
Expected Results:	Expected Results:	
System can reboot	successfully	
Test Execution Cycle Type:	Sanity	
Case Automation Type:	Manual	
Case State:	Ready	
Feature:	system usage	
target:	e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest	
image profile:	sato, sato-sdk, lsb-sdk	
Last Result	Not Run	

Test Case TC-835: adjust date and time
Summary:
adjust date and time
Steps:
<ul> <li>1.launch terminal and run "date -R" to check current system time</li> <li>2.adjust Date&amp;Time by these commands:</li> <li>For date command from coreutils, for example the sdk image use coreutils, you should use</li> <li>following syntax:</li> <li>\$ date -s "10:00:00 20100809"</li> <li>\$ date -R</li> <li>\$ Mon, 09 Aug 2010 10:00:00 +0000</li> <li>For date command in busybox, for example the sato image use busybox, you should use following syntax:</li> <li>\$ date "080910002010"</li> <li>\$ date -R</li> <li>\$ Mon, 09 Aug 2010 10:00:00 +0000</li> <li>3. check date with "date -R" and the time shown on matchbox-panel</li> </ul>
Expected Results:

System time should be adjust to what you specified	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Auto
Case State:	Ready
Feature:	system usage
target:	e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	Not Run

### Test Case TC-836: switch among multi applications and desktop

### Summary:

switch among multi applications and desktop Steps:

1. launch several applications(like contacts, file manager)

- Idunch terminal
   switch among multi applications and desktop
   close applications

Note: The case is for sato image only.

### Expected Results:

1. user could switch among multi applications and desktop

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	e-menlow, blacksand, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk
Last Result	Not Run

Test Case TC-837:	vncserver for target
Summary:	
<i></i>	
Check if vncserver	setup work in target and vnc client could connect it
Steps:	
1. Check if x11vnc i	is installed in target
	11vnc -display :0.0", check the ip address of the target
3. On a client, run command "vncviewer \$ip_address_of_target:0"	
Expected Results:	
A virtual X deskton	of target should be pop-up on the client
A windar A desktop	
Test Execution Cycle Type:	Weekly

Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemumips, e-menlow, blacksand, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk
Last Result	Not Run

### Test Case TC-838: file manager

### Summary:

file manager

Steps:

1.launch file manager from application panel
 view folder/file in file manager
 copy and paste folder/file in file manager

Note: The test is only for sato image

Expected Results:

1.folder and file could be listed in file browser with different display mode

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	e-menlow, blacksand, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk
Last Result	Not Run

Test Case TC-839	Test Case TC-839: system dmesg log check	
Summary:		
check if there is err	or in dmesg after system boot up	
Steps:		
1 boot system and	run command "dmesg"	
	run command umesy	
Expected Results:		
No error message i	n dmesg	
Test Execution	Weekly	
Cycle Type:	•	
Case Automation Type:	Manual	
Case State:	Ready	
Feature:	system usage	
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest	

image profile:	sato, sato-sdk, lsb-sdk
Last Result	Not Run

Test Case TC-840	Test Case TC-840: usb mount	
Summary:		
verify that system of	can mount plugged usb automatically	
<u>Steps:</u>		
1. boot system 2. plug usb stick		
Expected Results:		
1. system notify that	at usb stick is accessible	
Test Execution Cycle Type:	Weekly	
Case Automation Type:	Manual	
Case State:	Ready	
Feature:	system usage	
target:	e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest	
image profile:	sato, sato-sdk, lsb-sdk	
Last Result	Not Run	

Test Case TC-841: usb read files			
Summary:			
verify that system of	can read files from usb		
Steps:			
<ol> <li>boot system</li> <li>plug usb stick</li> <li>view files in usb</li> <li>copy some files f</li> </ol>	by file browser from usb to local hardware		
Expected Results:	Expected Results:		
1. view/copy succe	essfully		
Test Execution Cycle Type:	Weekly		
Case Automation Type:	Manual		
Case State:	Ready		
Feature:	system usage		
target:	e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest		
image profile:	sato, sato-sdk, lsb-sdk		
Last Result	Not Run		

Summary:	
verify that system of	can unmout usb automically
Steps:	
1. boot system	
<ol> <li>2. plug usb stick</li> <li>3. view files in usb</li> </ol>	by file browser
4.unplug usb	
Expected Results:	
1. usb direcoty in fi	le browser automatically missed
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	Not Run

Test Case TC-843: usb write files		
Summary:		
verify that system of	can write files to usb	
<u>Steps:</u>		
<ol> <li>boot system</li> <li>plug usb stick</li> <li>create files in us</li> <li>copy some files files files</li> </ol>	b rom local hardware to usb	
Expected Results:		
1. create/copy succ	cessfully	
Test Execution Cycle Type:	Weekly	
Case Automation Type:	Manual	
Case State:	Ready	
Feature:	system usage	
target:	e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest	
image profile:	sato, sato-sdk, lsb-sdk	
Last Result	Not Run	

### Test Case TC-844: file copy by scp

Summary:

check if file can be copied from remote machine to device by scp <u>Steps:</u> 1. check avahi is install and started

2. get system IP and try "scp file \$IP:/home/root" from remote machine (file >= 500M for real HW, file>=5M for QEMU)

### Expected Results:

File can be copied from remote machine to device by scp

The car be copied from remote machine to device by sep	
Test Execution Cycle Type:	Sanity
Case Automation Type:	Auto
Case State:	Ready
Feature:	connectivity
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	Not Run

Test Case TC-845: connman launch after boot	
Summary:	
After system boote	ed, the connmand daemon should be launched
<u>Steps:</u>	
1. boot system 2. "ps  grep connm 3. check if there is	and" a thread named connmand in background
Expected Results:	
There should be or	ne thread named connmand in background
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	connectivity
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk
Last Result	Not Run

### Test Case TC-846: ethernet enabled in connman

### Summary:

After system boot, ethernet can get IP address with connman Steps:

1. boot system with network cable plugged in

"ps |grep connmand" if connmand is started
 "ifconfig" check ethernet could get IP address and ping the address from remote machine

### Expected Results:

Ethernet interface of	Ethernet interface can get IP via connman	
Test Execution Cycle Type:	Weekly	
Case Automation Type:	Manual	
Case State:	Ready	
Feature:	connectivity	
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest	
image profile:	sato, sato-sdk	
Last Result	Not Run	

Test Case TC-847: only one connmand in background		
<u>Summary:</u>		
there should be no	more than one connmand in background	
<u>Steps:</u>		
4. run command "c	hould be in background	
Expected Results:		
There will be only o	one connmand instance in background	
Test Execution Cycle Type:	Weekly	
Case Automation Type:	Manual	
Case State:	Ready	
Feature:	connectivity	
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest	
image profile:	sato, sato-sdk	
Last Result	Not Run	

Test Case TC-848: remote access by ssh	
Summary:	
check if the device	can be accessed remotely by ssh
<u>Steps:</u> 1. check avahi is in 2. get system IP an	stall and started d try "ssh \$IP" from remote machine
Expected Results: it is ok to access sy	rstem by ssh from remote machine
Test Execution Cycle Type:	Sanity
Case Automation	Auto

Type:	
Case State:	Ready
Feature:	connectivity
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	Not Run

Test Case TC-849	: ethernet static ip set in connman	
Summary:		
we could get static	ip for ethernet in connman	
<u>Steps:</u>		
1. launch connman	-properities	
2. choose ethernet as following:	device and set static ip for it. For example, in our internal network, we can set	
ip address: 10.239	48.xxx	
Broadcast: 10.239.48.255		
Mask: 255.255.255.0		
Expected Results:		
we can set static ip	for ethernet device	
Test Execution Cycle Type:	Fullpass	
Case Automation Type:	Manual	
Case State:	Ready	
Feature:	connectivity	
target:	e-menlow, blacksand, crownbay, sugarbay, jasperforest	
image profile:	sato-sdk	
Last Result	Not Run	

Test Case TC-850:	ethernet get IP in connman via DHCP
Summary:	
ethernet device can	get IP in connman via DHCP
Steps:	
2. Check if ethernet 3. Choose DHCP m	thernet device in connman device can work with static IP lethod for ethernet device f ethernet device get IP address via DHCP
Expected Results:	
Ethernet device car	n get dynamic IP address via DHCP in connman
Test Execution Cycle Type:	Fullpass

Case Automation Type:	Manual
Case State:	Ready
Feature:	connectivity
target:	e-menlow, blacksand, crownbay, sugarbay, jasperforest
image profile:	sato-sdk
Last Result	Not Run

## Test Case TC-851: connman offline mode in connman-gnome Summary:

change offline mode in comman-gnome can make all connection off <u>Steps:</u>

1. Launch connman-properties after system booting

2. choose "offline mode" and check the connection of all network interfaces Expected Results:

All connection should be off after clicking "offline mode"

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	connectivity
target:	qemux86_32, qemux86_64, qemuarm, qemumips, e-menlow, blacksand, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk
Last Result	Not Run

Test Case TC-852: X server can start up with runlevel 5 boot	
Summary:	
check if X server can work well after system runlevel 5 booting	
Steps:	
1. boot up system with default runlevel	
Expected Results:	
X server can start up well and desktop display has no problem	
Test Execution Cycle Type:	Sanity
Case Automation Type:	Auto
Case State:	Ready
Feature:	graphics
target:	qemux86_32, qemux86_64, qemuarm, qemumips, e-menlow, blacksand, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk
Last Result	Not Run

#### Test Case TC-853: qt application quicky

#### Summary:

quicky is a simple note-taking application with Wiki-style syntax and behaviour <u>Steps:</u>

launch quicky and write something in quicky

#### Expected Results:

http://qt-apps.org/content/show.php/Quicky?content=80325

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	graphics
target:	e-menlow, blacksand, crownbay, sugarbay, jasperforest
image profile:	sato-sdk
Last Result	Not Run

#### Test Case TC-854: standby

#### Summary:

system can enter standby and resume from standby

#### Steps:

1. boot system and launch terminal; check output of "date" and launch script "continue.sh"

2. echo "mem" > /sys/power/state

- 3. After system go into S3 mode, move mouse or press any key to make it resume
- 4. Check "date" and script "continue.sh"
- 5. Check if application in X can work as normal

continue.sh as below:

Expected Results:

screen should resume back and script can run continuously

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage

target:	e-menlow, blacksand, crownbay, sugarbay, jasperforest
image profile:	sato-sdk
Last Result	Not Run

# Test Case TC-907: check CPU utilization after standby

Summary:

check CPU utilization after standby Steps:

1. Start up system

2. run "top" command and check if there is any process eating CPU time

3. make system into standby and resume it

4. run "top" command and check if there is any difference with the data before standby

#### Expected Results:

There should be no big difference before/after standby with "top"

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	crownbay, sugarbay
image profile:	sato, sato-sdk
Last Result	Not Run

# Test Case TC-855: Test if LAN device works well after resume from suspend state <u>Summary:</u>

<u>ouriniary.</u>

Test if LAN device works well after resume from suspend state.

Steps:

- 1. boot system and launch terminal
- 2. echo "mem" > /sys/power/state
- 3. After system go into S3 mode, move mouse or press any key to make it resume

4. check ping status

Expected Results:

ping should always work before/after standby

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	e-menlow, blacksand, crownbay, sugarbay, jasperforest
image profile:	sato-sdk
Last Result	Not Run

#### Test Case TC-856: Test if usb hid device works well after resume from suspend state Summary:

Test if usb hid device works well after resume from suspend state.

#### Steps:

1. boot system and launch terminal

- 2. echo "mem" > /sys/power/state
   3. After system go into S3 mode, move mouse or press any key to make it resume
- 4. check usb mouse and keyboard

#### Expected Results:

usb mouse and keyboard should work	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	e-menlow, blacksand, crownbay, sugarbay, jasperforest
image profile:	sato-sdk
Last Result	Not Run

Test Case TC-895	: disk space check
Summary:	
There should be er	nough disk space for QEMU rootfs
Steps:	
2. Check the output	argets(with rootfs.ext3 file) It of command df Ian 5M disk space available, we assume it a failure
Expected Results:	
There should be er	nough disk space for QEMU targets
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips
image profile:	sato, sato-sdk
Last Result	Not Run

Test Case TC-896: click terminal icon on X desktop Summary:

terminal icon should work without problem on X desktop Steps:

1. After system launch and X start up, click terminal icon on desktop

2. Check if only one	e terminal window launched and no other problem met
Expected Results:	
there should be no	problem after launching terminal
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay
image profile:	sato, sato-sdk
Last Result	Not Run

Test Case TC-897	: Add multiple files in music player
Summary:	
music player shoul	d be no problem when adding multiple files at same time
Steps:	
1. Launch music pl 2. Add multiple file	ayer s(5 files) in music player at same time
Expected Results:	
music player shoul	d be OK with this action
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	e-menlow, blacksand, crownbay, sugarbay
image profile:	sato-sdk
Last Result	Not Run

Test Case TC-898	: system shutdown with UNFS
Summary:	
system shutdown v	vith UNFS should work
Steps:	
1. Use UNFS to sta	art QEMU targets
2. Run shutdown in	I QEMU targets
Expected Results:	
QEMU shutdown w	vith UNFS should work
Test Execution	
Cycle Type:	Weekly
Case Automation	Manual
Type:	IVIAIIUAI

Case State:	Ready

Last Result	Not Run

Test Case TC-899	: no connman-gnome icon on desktop
Summary:	
there should be no	connman-gnome icon on desktop
<u>Steps:</u>	
<ol> <li>Launch sato ima</li> <li>There should be invoked by toolbar</li> </ol>	no connman-gnome icon on desktop, and connman-properties should be only
Expected Results:	
There should be no invoked by toolbar	o connman-gnome icon on desktop, and connman-properties should be only
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay
image profile:	sato, sato-sdk
0 1	

#### Test Case TC-900: application contacts should work

#### Summary:

application contacts should work without problem Steps:

Make sure X is started up
 Check if there is "contacts" icon on desktop and run it
 Check if there is any error by checking the output of this action and dmesg log

Expected Results:

"contacts" launch should not cause any error

	,
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay
image profile:	sato, sato-sdk
Last Result	Not Run

Test Case TC-902	: x11vnc icon click for target
Summary:	
Check if vncserver	could work in target by clicking x11vnc icon
Steps:	
2. Click the x11vnc	a x11vnc icon in target icon and check the ip address of the target command "vncviewer \$ip_address_of_target:0"
Expected Results:	
A virtual X desktop	of target should be pop-up on the client
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemumips, e-menlow, blacksand, crownbay, sugarbay
image profile:	sato, sato-sdk
Last Result	Not Run

Test Case TC-908	: RTLDLIST path check for Idd command
Summary:	
check if the file set	in RTLDLIST is valid
<u>Steps:</u>	
	up, check if the RTLDLIST variable in Idd command in RTLDLIST should be valid
Expected Results:	
check if the file set	in RTLDLIST is valid
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato-sdk
Last Result	Not Run

# Test Case TC-910: check bash in image

Summary:

check if bash exists in image

#### Steps:

1. After system is up, check if bash command exists Expected Results:

bash command sho	ould exist in image
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	Not Run

Test Case TC-911	: "Install/Remove Software" icon should work
Summary:	
"Install/Remove So	ftware" icon should work
Steps:	
1. After system is u	p, check if "Install/Remove Software" icon could work
Expected Results:	
"Install/Remove So	ftware" icon should work
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemumips
image profile:	sato, sato-sdk

# Test Case TC-879: audio stop (wav)

#### Summary:

check if music player can stop playing with wav format file

#### Steps:

copy sample wav file to system
 launch music player can play the wav file

<ol> <li>click "stop" button to stop playing</li> <li>click "start" button to resume playing</li> </ol>			
Expected Results:			
wav file can be star	wav file can be start/stop without problem		
Test Execution Cycle Type:	Weekly		
Case Automation Type:	Manual		
Case State:	Ready		
Feature:	multi-media		
target:	e-menlow, blacksand, crownbay, sugarbay		
image profile:	sato-sdk		
Last Result	Not Run		

Test Case TC-880	Test Case TC-880: video play (mpeg)	
Summary:		
make sure video pi	ayer cannot play mpeg format file	
Steps:	<u>Steps:</u>	
<ol> <li>copy sample mpeg file to system</li> <li>launch video player and make sure it cannot play the mpeg file</li> </ol>		
Expected Results:		
mpeg file cannot be	e played	
Test Execution Cycle Type:	Weekly	
Case Automation Type:	Manual	
Case State:	Ready	
Feature:	multi-media	
target:	e-menlow, blacksand, crownbay, sugarbay	
image profile:	sato-sdk	
Last Result	Not Run	

Test Case TC-881: video play (ogg)		
Summary:		
check if video playe	er can play ogg format file	
<u>Steps:</u> 1. copy sample ogg file to system 2. launch video player can play the ogg file		
Expected Results: ogg file can be played without problem		
Test Execution Cycle Type:	Weekly	
Case Automation Type:	Manual	

Case State:	Ready
Feature:	multi-media
target:	e-menlow, blacksand, crownbay, sugarbay
image profile:	sato-sdk
Last Result	Not Run

Test Case TC-882: video stop (ogg)		
Summary:		
check if video playe	er can play ogg format file	
Steps:		
<ol> <li>copy sample ogg file to system</li> <li>launch video player can play the ogg file</li> <li>click "stop" button to stop playing</li> <li>click "start" button to resume playing</li> </ol>		
Expected Results:		
ogg file can be start/stop without problem		
Test Execution Cycle Type:	Weekly	
Case Automation Type:	Manual	
Case State:	Ready	
Feature:	multi-media	
target:	e-menlow, blacksand, crownbay, sugarbay	
image profile:	sato-sdk	
Last Result	Not Run	

# 1.8 Test Suite : Compliance

Test Case TC-883: LTP subset test suite
Summary:
LTP subset test suite
Steps:
For real hardware, run following component,
syscalls
fs
fsx
dio
io
mm
ipc
sched
math
nptl
pty
admin tools

timers commands For QEMU, run following component syscalls mm ipc sched math nptl pty admin\_tools commands **Run Instructions:** LTP download: http://sourceforge.net/projects/ltp/files/LTP%20Source/ltp-20101031/ltp-full-20101031.bz2/download build steps: refer to http://ltp.sourceforge.net Run steps: 1. Build LTP with toolchain or in sdk image 2. For QEMU, create the gemu target with "-m 512", which makes some memory stress cases pass. For some issues, we could only set 128M for gemuarm and 256M for gemumips. 3. Copy LTP folder into target, for example, /opt/ltp. Modify script "runltp", remove test suites not to be tested 4. Comment runtests/sched: hackbench, which is not suitable to run in emulators 5. Prepare a tmp folder under your ltp folder, for example, create a tmp folder under your ltp folder, like /opt/ltp/tmp 6. ./runltp -p -l result-M2-20101218.log -C result-M2-20101218.fail -d /opt/ltp/tmp &> result-M2-20101218.fulllog (assume you mount your LTP disk at /opt and create your own tmp dir at /opt/ltp/tmp) Expected Results: Check the result on wiki, https://wiki.yoctoproject.org/wiki/LTP\_result, there should be no regression failure met. **Test Execution** Fullpass Cycle Type: **Case Automation** Semi-Auto Type: Case State: Ready Feature: core qemuarm, qemuppc, qemumips, blacksand, beagleboard, mpc8315e-rdb, target: routerstationpro, sugarbay image profile: sato-sdk, lsb-sdk Last Result Not Run

Test Case TC-884: POSIX subset test suite
Summary:
Run subset test suite of POSIX test suite
<u>Steps:</u>
POSIX test suite download: http://sourceforge.net/projects/posixtest/files/posixtest/posixtestsuite- 1.5.2/posixtestsuite-1.5.2.tar.gz/download build: refer to http://posixtest.sourceforge.net/
Run steps: 1. Get POSIX test suite as above 2. Start target and copy test suite into it 3. For qemu, option "-m 512" should be added

4. Make sure below is uncommented from LDFLAGS file: #-D\_XOPEN\_SOURCE=600 –lpthread –lrt –lm

5. For gcc 4.6, you need to add "-Wno-unused-but-set-variable -Wno-address" to CFLAGS in Makefile

6. Run following commands under POSIX test suite run\_tests SIG

run\_tests SEM run\_tests THR run\_tests TMR run\_tests MSG run\_tests TPS run\_tests MEM

#### Expected Results:

Compare the test result on wiki, https://wiki.yoctoproject.org/wiki/Posix\_result, there should be no more regression failures met.

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Semi-Auto
Case State:	Ready
Feature:	core
target:	qemuarm, qemuppc, qemumips, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, sugarbay
image profile:	sato-sdk, lsb-sdk
Last Result	Not Run

# Test Case TC-885: LSB subset test suite

Summary:

Run LSB subset test suite in target

Steps:

1. Get LSB image and start the image(if it is QEMU) with option "-m 512M"

2. Get the LSB test suite or run script creat-lsb-image under poky source directory "scripts/creat-lsb-image"

 Setup environment for lsb image in target with script LSB\_Setup.sh, it could be found under poky source directory "/meta/recipes-extended/lsb/lsbsetup/LSB\_Setup.sh"
 Select LSB test items in LSB web interface and run them

#### Expected Results:

Check the result on wiki, https://wiki.pokylinux.org/wiki/index.php?title=LSB\_result&action=edit&redlink=1. No regression failures should be met.

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	core
target:	blacksand, mpc8315e-rdb, sugarbay
image profile:	lsb-sdk
Last Result	Not Run

#### 1.9 Test Suite : Core Build System

Test Case TC-894: Init scripts Summary:

Provide an image/recipe skeleton as a canonical example. Check if can be built and run correctly

Steps:

1. Build image from poky source, check if skeleton script and skeleton-test can be built into the image

a. download poky source

b. modify the line IMAGE\_FEATURES += "apps-console-core \${SATO\_IMAGE\_FEATURES}" to IMAGE\_FEATURES += "appsconsole-core \${SATO\_IMAGE\_FEATURES}} service" in meta/recipes-sato/images/core-image-sato.bb (for sato image) or core-image-sato-sdk.bb (for sato-sdk image)

c. \$ source oe-init-build-env

add line "<POKY\_BASE>/meta-skeleton \" to conf/bblayer.conf

d. build the image

e. boot up the image, check the skeleton and skeleton-test should be in right place

/etc/init.d/skeleton

/usr/sbin/skeleton-test

2. Verify the basic function of skeleton. Check if skeleton script can start/stop the skeleton-test daemon.

Expected Results:

Init scripts can be built and run correctly

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
image profile:	
Last Result	Not Run

Test Case TC-920:	Minimal	image
Summary:		

Check if the minimal image can be built and run correctly.

Steps:

 Build a minimal image from poky source by following the wiki: https://wiki.yoctoproject.org/wiki/Minimal\_Image
 Check the size of the image. It should take less than 5M disk space after extraction.
 Verify the basic function of the image. Run "busybox –list" to get the commands list. Check if

#### Expected Results:

The minimal image can be built and run correctly.

these commands can run correctly.

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
Last Result	Not Run

#### Test Case TC-921: Share gcc work directories

Summary:

This feature make gcc use the shared source directory during the different building. Check if this feature can work for gcc 4.5.1 and gcc 4.6.0.

Steps:

1. Download the poky source and set build environment.

2. For gcc 4.5.1, add 2 lines to conf/local.conf : GCCVERSION ?= "4.5.1" SDKGCCVERSION ?= "4.5.1" For gcc 4.6.1, there is no need to add these 2 lines to conf/local.conf

3. Run bitbake command as below: bitbake gcc-cross bitbake gcc-cross gcc-cross-initial gcc-cross-intermediate -c clean bitbake gcc-crosssdk bitbake gcc-runtime bitbake libgcc bitbake gcc-cross-canadian-arm (for arm arch) bitbake gcc-cross-canadian-powerpc (for ppc arch) bitbake gcc-cross-canadian-mips (for mips arch)

4. Run "bitbake core-image-minimal", "bitbake core-image-sato", "bitbake core-image-sato-sdk" to build images. Verify the basic function of the images.

#### Expected Results:

After step3, you can check the tmp/work-shared/gcc-4.6.0 or tmp/work-shared/gcc-4.5.1 should in the build directory. Check the time of build process and the disk space usage of tmp/work-shared/gcc-version sub-directory. The images should be built and can work correctly.

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready

#### Test Case TC-923: PAM support

Check the Yocto should support PAM (Pluggable Authentication Module) Steps:

 Build a sato-sdk image from poky source with PAM support by following the wiki: https://wiki.yoctoproject.org/wiki/PAM\_Integration
 Refer to https://wiki.yoctoproject.org/wiki/PAM\_Integration, check the commands 'dropbear', 'login', 'passwd', 'useradd', 'su' can work correctly with PAM support and verify the function of PAM.

#### Expected Results:

The commands which have PAM support should run correctly and the function of PAM should work without problems.

Test Execution Cycle Type: Fullpass

Case State:	Ready	
Feature:	poky	
target:	build_system	
Last Result	Not Run	

Summary:

lib64-zlib lib32-zlib build should pass with multilib enabled

Steps:

1. Prepare poky build environment

2. by following https://wiki.pokylinux.org/wiki/Multilib, set local.conf to enable multilib build 3. build lib64-zlib and lib32-zlib, which should build pass without error

#### Expected Results:

lib64-zlib lib32-zlib build should pass with multilib enabled

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
Last Result	Not Run

#### Test Case TC-926: lib32 sato-sdk image build

Summary:

lib32 sato-sdk image could be built out with multilib support

Steps:

1. Prepare poky build environment

- 2. by following https://wiki.pokylinux.org/wiki/Multilib, set local.conf to enable multilib build
- 3. with rpm set for package format, build lib32 core-sato-sdk image
- 4. after build finished, start up the image and you should find a lib32 folder

Expected Results:

lib32 sato-sdk image could be built out with multilib support

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
Last Result	Not Run

#### Test Case TC-927: lib32 lsb-sdk image build

#### Summary:

lib32 lsd-sdk image should be built out with multilib support

Steps:

1. Prepare poky build environment

- 2. by following https://wiki.pokylinux.org/wiki/Multilib, set local.conf to enable multilib build
- 3. with rpm set for package format, build lib32 core-lsb-sdk image
- 4. after build finished, start up the image and you should find a lib32 folder

Expected Results:

lib32 lsd-sdk image should be built out with multilib support	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
Last Result	Not Run

#### Test Case TC-928: lib64 sato-sdk image build

Summary:

lib64 sato-sdk image should be built out with multilib support Steps:

Prepare poky build environment
 by following https://wiki.pokylinux.org/wiki/Multilib, set local.conf to enable multilib build

- with rpm set for package format, build lib64 core-lsb-sdk image
   after build finished, start up the image and you should find a lib64 folder

Expected Results:

lib64 sato-sdk image should be built out with multilib support

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready

# Test Case TC-930: lib64 lib32 build for deb

Summary:

lib64 lib32 build should work with deb format <u>Steps:</u>

1. Prepare poky build environment

2. by following https://wiki.pokylinux.org/wiki/Multilib, set local.conf to enable multilib build

3. with deb set for package format, build lib32 and lib64 core-sato-sdk image

4. after build finished, start up the image and you should find a lib32 or lib64 folder according to the image name, and deb format is used for packages

#### Expected Results:

lib64 lib32 build should work with deb format

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
Last Result	Not Run

#### Test Case TC-931: bitbake-layers show\_layers Summary: show\_layers could show current layers Steps: 1. prepare poky build environment 2. add meta-rt into bblayer.conf 3. run "bitbake-layers show\_layers", it should show the layers defined in bblayer.conf Expected Results: show\_layers could show current layers **Test Execution** Fullpass Cycle Type: Case Automation Manual Type: Case State: Ready Feature: poky target: build\_system Last Result Not Run

#### Test Case TC-932: bitbake-layers show\_overlayed Summary:

overlayed recipes should be shown with bitbake-layers

Steps:

prepare poky build environment
 copy a recipe from meta layer into meta-yocto, for example,
 /home/jxu49/osel/poky/meta/recipes-graphics/clutter/clutter-1.6\_1.6.14.bb
 run "bitbake-layers show\_overlayed", it should report clutter is overlayed by meta-yocto

Expected Results:

overlayed recipes should be shown with bitbake-layers

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
Last Result	Not Run

Test Case TC-933	: bitbake-layers show_appends	
Summary:	Summary:	
bitbake-layers show	w_appends should list bbappend files and recipe files they apply to	
Steps:		
1. prepare poky bui		
2. run "bitbake-laye	ers show_appends", it should list bbappend files and recipe files they apply to	
Expected Results:		
bitbake-layers show	w_appends should list bbappend files and recipe files they apply to	
Test Execution	Fullpass	
Cycle Type:		
Case Automation	Manual

Last Result	Not Run	

Test Case TC-934: bitbake-layers flatten
Summary:
bitbake-layers flattens layer configuration into a separate output directory
Steps:
<ol> <li>prepare poky build environment</li> <li>create a folder, for example, test</li> <li>run "bitbake-layers flatten test", all contents of all layers should be moved into the test folder, with any bbappends appended to corresponding recipes</li> <li>check if bbappends take effect, for example, check if test/recipes- bsp/formfactor/formfactor_0.0.bb has the code defined in meta-yocto/recipes- bsp/formfactor/formfactor_0.0.bbappend</li> </ol>
Expected Results:

bitbake-layers flatte	ns layer configuration into a separate output directory
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
Last Result	Not Run

# 1.10 Test Suite : BSP specific

Test Case TC-903	* RTC
Summary:	
Check if RTC(	(Real Time Clock) can work correctly
<u>Steps:</u>	
1. Read time fr	rom RTC registers.
root@localhos	t:/root> hwclock -r
Sun Mar 22 04	1:05:47 1970 -0.001948 seconds
2. Set system c	current time
root@localhos	t:/root> date 062309452008
3. Synchronize	e the system current time to RTC registers
root@localhos	t:/root> hwclock -w
4. Read time fr	rom RTC registers
root@localhos	t:/root> hwclock -r
5. Reboot targe	et and read time from RTC again.
Expected Results:	
	set the time successful
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready

Feature:	bsp
target:	beagleboard, mpc8315e-rdb
image profile:	sato-sdk
Last Result	Not Run

# Test Case TC-904: Watchdog

Summary:

## Check if watchdog can reset the target system

Steps:

#### 1. Check if watchdog device exist in /dev/ directory

2. Run command "echo 1 > /dev/watchdog" and wait for 60s. Then the target will reboot.

Expected Results:

The watchdog device exist in /dev/ directory and can reboot the target.

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	bsp
target:	beagleboard, routerstationpro
image profile:	sato-sdk
Last Result	Not Run

#### Test Case TC-905: SATA

Summary:

Test general use of SATA device on target, like mount, umount, read and write.

Steps:

1. Run "fdisk" command to create partition on SATA disk.

2. Mount/Umount

mke2fs /dev/sda1

mount -t ext2 /dev/sda1 /mnt/disk

umount /mnt/disk

3. Read/Write (filesystem)

touch /mnt/disk	c/test.txt
echo "abcd" >	/mnt/disk/test.txt
cat /mnt/disk/te	est.txt
4. Read/Write (	(raw)
dd if=/dev/sda1	of=/tmp/test bs=1k count=1k
This command	will read 1MB from /dev/sda1 to /tmp/test
Expected Results:	
The SATA dev	ice can mount, umount, read and write
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	bsp
target:	mpc8315e-rdb
image profile:	sato-sdk
Last Result	Not Run

#### Test Case TC-906: I2C/EEPROM

Summary:

#### Check if target can support EEPROM Steps:

1. Check eeprom device exist in /sys/bus/i2c/devices/

2. Run "hexdump eeprom" command

root@mpc8315e-rdb:/sys/bus/i2c/devices/1-0051> hexdump eeprom

0000000 9210 0b02 0211 0009 0b52 0108 0c00 3c00

# 0000010 6978 6930 6911 208c 7003 3c3c 00f0 8381

Expected Results:

#### Hexdump can read data from eeprom

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	bsp
target:	mpc8315e-rdb

image profile:	sato-sdk	
Last Result	Not Run
