Yocto 1.1 M3 Fullpass Test

Test Report

Project: yocto

Author: admin

Printed by TestLink on 31/07/2011

1 Test Suite : Yocto 1.1 M3 Fullpass Test

1.1 Test Suite : hob

Test Case TC-786: hob launch without error	
Summary: hob could be launched without error	
Steps: 1. Prepare poky build environment 2. launch hob with command "hob" 3. Check if hob is launched correctly and no error message in console	
Expected Results: hob launched correctly and no error message	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-787: package dependency check - acl	
Summary: acl package dependency selection should be correct	
Steps: 1. launch hob 2. select acl, 3 dependency packages should be shown in "image contents": acl, attr and ncurses 3. deselect acl, package acl should be removed 4. redo step 2,3 and the remaining packages in "image contents" should be consistent with the outputs in step 3	
Expected Results: the package list should be always consistent before/after several times package select/deselect	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-788: package dependency check - avahi&acl
Summary: avahi and acl package selection should not cause wrong package dependency

Steps: 1. launch hob 2. select avahi, a lot of dependency packages should be shown in "image contents" 3. select acl, it should be shown in "image contents" also 4. deselect avahi, acl, attr and ncurses should not be removed from "image contents" 5. deselect acl, it should be removed from "image contents" 4. redo step 2~5 and the remaining packages in "image contents" should be consistent with the outputs in step 5
Expected Results: Package list shown in image contents should be consistent before/after several times acl&avahi selection/deselection

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-789: base image selection
Summary: package list should be loaded for "image contents" for each selection in "base image" field
Steps: 1. launch hob 2. select one "Machine", for example, qemumips 3. select one image for "Base image", for example, "core-image-basic" 4. a list of packages should be loaded for "image contents"
Expected Results: package list should be loaded for "image contents" for each selection in "base image" field

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-790: package list re-load for "base image" change
Summary: package list should be re-loaded if changing image type for "base image"
Steps: 1. launch hob 2. select one "Machine", for example, qemumips 3. select one image for "Base image", for example, "core-image-basic" 4. a list of packages should be loaded for "image contents" 5. change the image type for "image contents", for example, "core-image-minimal", the list of packages should be re-loaded

Expected Results: package list should be re-loaded if changing image type for "base image"	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-794: package list re-load for "Machine" change	
Summary: package list for "image contents" should be re-loaded and correct when "Machine" changing	
Steps: 1. launch hob 2. select one "Machine", for example, qemuppc 3. select one image for "Base image", for example, "core-image-sato" 4. a list of packages should be loaded for "image contents" 5. select another machine type for "Machine", for example, beagleboard 6. a new list of packages should be re-loaded for "image contents" and should not same as the outputs in step 4	
Expected Results: package list for "image contents" should be re-loaded and correct when "Machine" changing	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-913: package list re-load correct for "Machine" change	
Summary: package list re-load correct for "Machine" change	
Steps: 1. launch hob 2. check the default value of "Machine", for example, qemux86, then choose a value for "base image", for example, "core-image-sato", write down the package number for the image 3. choose another value for "Machine", for example, beagleboard and choose the same value for "base image" as for qemux86, the pakcage number for beagleboard should not same as qemux86	
Expected Results: Different machine/image should have different package list	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual

Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-791: package list reset	
Summary: reset button should clear package list for "image contents"	
Steps: 1. launch hob 2. select one "Machine", for example, qemumips 3. select one image for "Base image", for example, "core-image-basic" 4. a list of packages should be loaded for "image contents" 5. click "reset" button, all packages should be cleared for "image contents"	
Expected Results: reset button should clear package list for "image contents"	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-792: customized package list save as bb file(add packages)	
Summary: user could use "save" or "save as" button to save customized bb file	
Steps: 1. launch hob 2. select one "Machine", for example, qemumips 3. select one image for "Base image", for example, "core-image-basic" 4. a list of packages should be loaded for "image contents" 5. select some un-selected package, for example, acpid 6. click "File"->"Save" or "Save As", it should save the user customized package list into a bb file 7. click "reset" button, and click "File"->"Open", choose the saved bb file 8. The user customized package list should be shown	
Expected Results: user could use "save" or "save as" button to save customized bb file	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-914: customized package list save as bb file(remove packages)	
Summary: user could use "save" or "save as" button to save customized bb file	
Steps: 1. launch hob 2. select one "Machine", for example, qemumips 3. select one image for "Base image", for example, "core-image-basic" 4. a list of packages should be loaded for "image contents" 5. deselect some un-selected package, for example, zypper 6. click "File"->"Save" or "Save As", it should save the user customized package list into a bb file 7. click "reset" button, and click "File"->"Open", choose the saved bb file 8. The user customized package list should be shown	
Expected Results: user could use "save" or "save as" button to save customized bb file	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-795: cancel customized package list save action	
Summary: cancel customized package list save action should not cause any error	
Steps: 1. launch hob 2. select one "Machine", for example, qemux86-64 3. select one image for "Base image", for example, "core-image-minimal" 4. a list of packages should be loaded for "image contents" 5. select some un-selected package, for example, acpid 6. click "x" button, a dialog should pop up and ask user if customiszations wants be saved. 7. click "yes" and click "cancel" in next page 8. hob should exit without error log	
Expected Results: No error log with hob exit when cancel customized package list save action	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-796: No native package shown in package list
Summary: There should be no native package shown in package list

Steps: 1. launch hob 2. check if there is any -native package in "Packages"	
Expected Results: There should be no native package shown in package list	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-798: stop build during image/package building	
Summary: "stop build" button should be able to stop/force stop building	
Steps: 1. launch hob 2. select one "Machine", for example, qemuarm 3. select one image for "Base image", for example, "core-image-sato" 4. a list of packages should be loaded for "image contents" 5. select some un-selected package, for example, acpid 6. click "bake" button to start build 7. in building page, click "stop build", and click "stop" or "force stop" to stop building	
Expected Results: "stop build" button should be able to stop/force stop building	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-799: search package name in package list	
Summary: User could search package name from "Search packages"	
Steps: 1. launch hob 2. search some package via "search packages", for example, avahi 3. the searched package should be shown in "packages"	
Expected Results: User could search package name from "Search packages"	
Test Execution Cycle Type:	Weekly

Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-800: task list re-load when base image change	
Summary: task list for "package collections" should be re-loaded when base image changing	
Steps: 1. launch hob 2. select one "Machine", for example, qemuppc 3. select one image for "Base image", for example, "core-image-sato" 4. a list of packages should be loaded for "image contents" and you could find some tasks are select for "package collections" 5. select another image type for "base image", for example, beagleboard 6. a new list of tasks should be re-loaded	
Expected Results: task list for "package collections" should be re-loaded when base image changing	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-806: user could customize threads of bitbake and make	
Summary: user could customize threads of bitbake and make in hob	
Steps: 1. launch hob 2. select one "Machine", for example, qemux86 3. select one image for "Base image", for example, "core-image-basic" 4. a list of packages should be loaded for "image contents" and you could find some tasks are select for "package collections" 5. click Edit->Preferences, and customize number for "bitbake threads" and "make threads", for example, you could set both 1 for them 6. click "bake" and check 'ps' command output if there is one thread running	
Expected Results: user could customize threads of bitbake and make in hob	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-807: add layer for new target build	
Summary: user could add layer for new target build	
Steps: 1. launch hob 2. click File->Add Layer, then choose one layer, for example, you could download meta-intel.git and use sugarbay 3. check "Machine" list and sugarbay should be available 4. Meanwhile, -live image should be available in "base image", choose one type, for example, core-image-sato-sdk 5. click "bake" and check the build result	
Expected Results: user could add layer for new target build	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-810: another build after stop build	
Summary: user could start another build after stop a build	
Steps: 1. launch hob 2. select one "Machine", for example, qemuarm 3. select one image for "Base image", for example, "core-image-sato" 4. a list of packages should be loaded for "image contents" 5. select some un-selected package, for example, acpid 6. click "bake" button to start build 7. in building page, click "stop build", and click "stop" to stop building 8. back to the main UI, and select another image, then click "bake" button 9. wait for the build finished and it should be no error met	
Expected Results: user could start another build after stop a build	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-917: back to main UI after back stopped
Summary:

click "back" button should bake to main UI after bake stopped
Steps: 1. launch hob 2. select one "Machine", for example, qemuarm 3. select one image for "Base image", for example, "core-image-sato" 4. a list of packages should be loaded for "image contents" 5. select some un-selected package, for example, acpid 6. click "bake" button to start build 7. in building page, click "stop" or "force stop" 8. click "back" button, it should return to main UI
Expected Results: click "back" button should bake to main UI after bake stopped

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-919: customized preference items save in local.conf
Summary: user customized items should be saved in local.conf or hob.local.conf
Steps: 1. launch hob 2. select one "Machine", for example, qemumips 3. select one image for "Base image", for example, "core-image-basic" 4. a list of packages should be loaded for "image contents" 5. select some un-selected package, for example, acpid 6. click "Edit"->"Preferences", change the value of all items in this page, for example, changing "poky" to "poky bleeding" for "distribution", selecting "GPLv3", "rpm" for "package format", "3", "4" for "bitbake threads" and "Make threads" and enable toolchain build, setting "x86_64" for "Toolchain host" 6. exit hob 7. check local.conf, above modifications should be set in it 8. re-launch hob and check "Preferences", all above modifications should be set in this page
Expected Results: user customized items should be saved in local.conf or hob.local.conf

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-793: bake a image without error (base image)
Summary:

user could use hob to build a image without error
Steps: 1. launch hob 2. select one "Machine", for example, qemumips 3. select one image for "Base image", for example, "core-image-basic" 4. a list of packages should be loaded for "image contents" 5. click "Bake" and wait for a successful build finished
Expected Results: user could use hob to build a image without error

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-915: bake a image without error (added package)
Summary: user could use hob to build a image without error
Steps: 1. launch hob 2. select one "Machine", for example, qemumips 3. select one image for "Base image", for example, "core-image-basic" 4. a list of packages should be loaded for "image contents" 5. select some un-selected package, for example, acpid 6. click "Bake" and wait for a successful build finished 7. after build finished, check if the added package built into image
Expected Results: user could use hob to build a image without error

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-916: bake a image without error (remove packages)
Summary: user could use hob to build a image without error
Steps: 1. launch hob 2. select one "Machine", for example, qemumips 3. select one image for "Base image", for example, "core-image-basic" 4. a list of packages should be loaded for "image contents"

5. deselect some un-selected package, for example, zypper 6. click "Bake" and wait for a successful build finished 7. after build finished, check if the removed package not built into package	
Expected Results: user could use hob to build a image without error	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-797: back to main UI after bake finished	
Summary: click "back" button should bake to main UI after bake finished	
Steps: 1. launch hob 2. select one "Machine", for example, qemuarm 3. select one image for "Base image", for example, "core-image-sato" 4. a list of packages should be loaded for "image contents" 5. select some un-selected package, for example, acpid 6. click "bake" button to start build 7. in bake page, wait for build finished 8. click "back" button, it should return to main UI	
Expected Results: click "back" button should bake to main UI after bake finished	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-809: toolchain built correct with user customization	
Summary: toolchain generated correct with user selection	
Steps: 1. launch hob 2. select one "Machine", for example, beagleboard 3. select one image for "Base image", for example, "core-image-sato" 4. a list of packages should be loaded for "image contents" and you could find some tasks are select for "package collections" 5. click Edit->Preferences, and select "Build external development toolchain with image", for "toolchain host", you could pick one and choose one arch for "toolchain host", for example, x86_64 6. click "bake" button and it should generate toolchain as well as selected packages/images 7. check the generated toolchain tarball, the name should be consistent with the above selection, for example, x86_64 for host name, arm for beagleboard	

8. use the toolchain to build a C program and make sure it workable in target	
Expected Results: toolchain generated correct with user selection	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-801: non-GPLv3 build	
Summary: non-GPLv3 build should be supported for hob	
Steps: 1. launch hob 2. select one "Machine", for example, qemux86 3. select one image for "Base image", for example, "core-image-basic" 4. a list of packages should be loaded for "image contents" and you could find some tasks are select for "package collections" 5. click Edit->Preferences, and select "Exclude GPLv3 packages" 6. click "bake" to build a non-GPLv3 image 7. After build is finished, check if there is any GPLv3 packages built in	
Expected Results: non-GPLv3 build should be supported for hob	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-804: distribution selection for image/package build	
Summary: user could select different distribution for "distribution"	
Steps: 1. launch hob 2. select one "Machine", for example, qemux86 3. select one image for "Base image", for example, "core-image-basic" 4. a list of packages should be loaded for "image contents" and you could find some tasks are select for "package collections" 5. click Edit->Preferences, and select different distribution for "distribution", for example, poky-lsb 6. click "bake" button and it should generate packages or image with selected distribution	
Expected Results: user could select different distribution for "distribution"	
Test Execution	Fullpass

Cycle Type:	
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-802: ipk package build for image/package build	
Summary: build image with ipk package format	
Steps: 1. launch hob 2. select one "Machine", for example, qemux86 3. select one image for "Base image", for example, "core-image-basic" 4. a list of packages should be loaded for "image contents" and you could find some tasks are select for "package collections" 5. click Edit->Preferences, and select ipk for "package format" 6. click "bake" button and it should generate images with ipk format	
Expected Results: build image with ipk package format	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

Test Case TC-803: deb package build for image/package build	
Summary: build image with deb package format	
Steps: 1. launch hob 2. select one "Machine", for example, qemux86 3. select one image for "Base image", for example, "core-image-basic" 4. a list of packages should be loaded for "image contents" and you could find some tasks are select for "package collections" 5. click Edit->Preferences, and select deb for "package format" 6. click "bake" button and it should generate images with dformat	
Expected Results: build image with deb package format	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob

Last Result	**Not Run**

Test Case TC-918: rpm package build for image/package build	
Summary: build image with rpm package format	
Steps: 1. launch hob 2. select one "Machine", for example, qemux86 3. select one image for "Base image", for example, "core-image-basic" 4. a list of packages should be loaded for "image contents" and you could find some tasks are select for "package collections" 5. click Edit->Preferences, and select rpm for "package format" 6. click "bake" button and it should generate images with rpm format	
Expected Results: build image with rpm package format	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	hob
Last Result	**Not Run**

1.2 Test Suite : System & Core OS

Test Case TC-811: zypper command installed and workable	
Summary: check if zypper is installed and can work	
Steps: 1. Run command "zypper", and check the output	
Expected Results: Command "zypper" print the list of available global options and commands	
Test Execution Cycle Type:	Sanity
Case Automation Type:	Auto
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-812: zypper help search	
Summary: check help option with zypper command	
Steps: 1. Run "zypper help search" and check the output	
Expected Results: The command should print help for the search command	
Test Execution Cycle Type:	Sanity
Case Automation Type:	Auto
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-813: zypper search package	
Summary: search package with zypper	
Steps: 1. Run "zypper search package_name" and check the output, for example "zypper search avahi"	
Expected Results: The command should search package "avahi" is installed or not	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Auto
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-814: zypper remove package
Summary: remove package with zypper
Steps: 1. Run "zypper rm pakcage_name" and check the output, for example "zypper rm avahi"

Expected Results: The command should remove package "avahi"	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-815: zypper install package	
Summary: install package with zypper	
Steps: 1. Set up a yum based repository on local server 2. Build out a package, which does not need any run-time dependency package, with local poky tree. For example, package "man" 3. In target system, run "zypper addrepo http://ip_address_of_repository zypper_test_repo" 4. Run "zypper refresh" to refresh the zypper repository cache 5. Run "zypper install package_name" and check the output, for example "zypper install man" to install package, which has no run-time dependency	
Expected Results: The command should install package "man"	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-816: zypper install dependency package
Summary: install dependency package with zypper
Steps:

1. Set up a yum based repository on local server

2. Build out a package, which does not need any run-time dependency package, with local poky tree. For example, package "mc"

3. In target system, run "zypper addrepo http://ip_address_of_repository zypper_test_repo"

4. Run "zypper refresh" to refresh the zypper repository cache

5. Run "zypper install package_name" and check the output, for example "zypper install mc" to install package, which needs run-time dependency packages installed also, like ncurses-terminfo.

Expected Results:

The command should install package "mc" and denpendency package ncurses-terminfo.

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-817: zypper install .all packages

Summary:

install packages from all folder with zypper

Steps:

1. Set up a yum based repository on local server
2. Build out a package, which belongs to all folder, for example, xcursor-transparent-theme-dbg-0.1.1-r3.all.rpm.
3. In target system, run "zypper addrepo http://ip_address_of_repository zypper_test_repo"
4. Run "zypper refresh" to refresh the zypper repository cache
5. Run "zypper install xcursor-transparent-theme-dbg" and check the output

Expected Results:

package install from all folder should be installed successfully with zypper

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-818: rpm query package

Summary: make sure rootfs image is built with rpm packages	
Steps: 1. launch terminal 2. run command "rpm -qa", which lists all existing packages in system	
Expected Results: "rpm -qa" should print all existing packages in system	
Test Execution Cycle Type:	Sanity
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-819: rpm install package	
Summary: rpm format package can be installed	
Steps: 1. Get a RPM package(for example, avahi or powertop) from zypper repository or build one on local machine 2. Copy the package into image, run command "rpm -ivh package_name" to install the package	
Expected Results: RPM format package can be installed	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-820: rpm install dependency package
Summary: rpm command should report dependency when installing package

Steps: 1. Get a RPM package or build one on local machine, which should have run-time dependency. For example, mc RPM should depends on ncurses-terminfo 2. Run "rpm -ivh package_name" and check the output, for example "rpm -ivh mc.rpm*" should report the dependency on ncurses-terminfo	
Expected Results: rpm command should report message when some RPM installation depends on other packages	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-821: rpm remove package	
Summary: rpm command can remove package in system	
Steps: 1. Launch terminal and run command "rpm -e package_name" to remove some package, for example, avahi	
Expected Results: RPM package can be removed by command rpm	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-909: check rpm install/removal log file size	
Summary: The case is to track log file size after rpm install/removal	
Steps: 1. After system is up, check the log file size after rpm/zypper install/removal 2. for rpm, there will be some database files under /var/lib/rpm/, named as "__db.xxx" and there will	

be some log files under /var/lib/rpm/log, named as "log.xxxxxx". Each file will occupy about 10MB. 3. after several rpm/zypper install/removal, rpm will create several log files under /var/lib/rpm/log, which eat lots of system disk space.	
Expected Results: there should be some method to keep rpm log in a small size	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips
image profile:	sato, sato-sdk
Last Result	**Not Run**

Test Case TC-822: boot and install from USB	
Summary: boot and install image from usb stick	
Steps: 1. plugin usb which contains live image burned 2. configure device BIOS to firstly boot from USB if necessary 3. boot the device and select some option like "Boot and Install" from boot menu 4. proceed through default install process 5. Remove USB, and reboot into new installed system.	
Expected Results: 1. User can choose install system from usb stick onto harddisk from boot menu or command line option 2. Imstalled system can boot up	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	installation&boot
target:	e-menlow, blacksand, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-823: live boot from USB	
Summary: live boot from USB	
Steps: boot live image from usb stick 1. plugin usb which contains live image burned 2. configure device BIOS to firstly boot from USB if necessary 3. boot the device and select some option like "boot from usb" from boot menu	
Expected Results:	

1. User can choose boot from live image on usb stick from boot menu or command line option
2. Live image can boot up with usb stick

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	installation&boot
target:	e-menlow, blacksand, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-824: boot from runlevel 3

Summary:

Verify that system can boot from runlevel 3

Steps:

1. Boot into system and edit /etc/inittab to make sure system enter init 3 by default

########

id:3:initdefault

#########

2. reboot system, and press Tab to enter "grub"
3. edit "kernel" line and add "psplash=false text" at the end
4. Press "enter" to boot system

Expected Results:

system should boot to runlevel 3.

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	installation&boot
target:	e-menlow, blacksand, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-825: boot from runlevel 5

Summary:

Verify that system can boot from runlevel 5

Steps:

1. Boot into system and edit /etc/inittab to make sure system enter init 5 by default

########

id:5:initdefault

########

2. reboot system, and press Tab to enter "grub"
3. edit "kernel" line and make sure no "psplash=false text" in grub cmdline
4. Press "enter" to boot system

Note: The test is only for sato image.

Expected Results:

system should boot to runlevel 5.

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	installation&boot
target:	e-menlow, blacksand, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk
Last Result	**Not Run**

Test Case TC-826: g++ compile in sdk image

Summary:

check if g++ can compile program in sdk image

Steps:

1. Boot up sdk image
2. check if g++ is built in
3. compile following program test.c "g++ test.c -o test -lm"
4. run "test" and check the output

test.c:

```
##########
#include <stdio.h>
#include <math.h>

double
convert(long long l)
{
  return (double)l;    // or double(l)
}

int
main(int argc, char * argv[])
{
  long long l = 10;
  double f;

  f = convert(l);
  printf("convert: %lld => %f\n", l, f);

  f = 1234.67;
  printf("floorf(%f) = %f\n", f, floorf(f));
```

```
   return 0;
}
##########
```

Expected Results:

executable binary test can run without problem

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	sdk
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-827: gcc compile in sdk image

Summary:

check if gcc can compile program in sdk image

Steps:

1. Boot up sdk image
2. check if gcc is built in
3. compile following program test.c "gcc test.c -o test -lm"
4. run "test" and check the output

test.c:

```
##########
#include <stdio.h>
#include <math.h>

double
convert(long long l)
{
   return (double)l;    // or double(l)
}

int
main(int argc, char * argv[])
{
   long long l = 10;
   double f;

   f = convert(l);
   printf("convert: %lld => %f\n", l, f);

   f = 1234.67;
   printf("floorf(%f) = %f\n", f, floorf(f));
   return 0;
}
##########
```

Expected Results:

executable binary test can run without problem

Test Execution Cycle Type:	Weekly

Case Automation Type:	Manual
Case State:	Ready
Feature:	sdk
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-828: run command make in sdk image

Summary:

check if command make can work in sdk image

Steps:

1. Boot up sdk image
2. check if make is built in
3. run command "make" with following makefile and build the test.c file from case "gcc compile in sdk image"

```
test: test.o
	gcc -o test test.o -lm
test.o: test.c
	gcc -c test.c
```

Expected Results:

make command can work without problem

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	sdk
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-829: cvs project compile in sdk image

Summary:

cvs project could be compiled in sdk image

Steps:

1. Download cvs project from http://ftp.gnu.org/non-gnu/cvs/source/feature/1.12.13/cvs-1.12.13.tar.bz2
2. Copy cvs tarball into sdk image
3. Extract the tarball and do "configure", "make" and "make install"

Expected Results:

cvs project could be compiled successfully

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	sdk
target:	e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-830: iptables project compile in sdk image
Summary: iptables project could be compiled in sdk image
Steps: 1. Download iptables project from http://netfilter.org/projects/iptables/files/iptables-1.4.11.tar.bz2 2. Copy iptables tarball into sdk image 3. Extract the tarball and do "configure", "make" and "make install"
Expected Results: iptables could be compiled successfully

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	sdk
target:	e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-831: sudoku-savant project compile in sdk image
Summary: sudoku-savant could be compiled in sdk image
Steps: 1. Download sudoku-savant project from http://downloads.sourceforge.net/project/sudoku-savant/sudoku-savant/sudoku-savant-1.3/sudoku-savant-1.3.tar.bz2 2. Copy sudoku-savant tarball into sdk image 3. Extract the tarball and do "configure", "make"
Expected Results: sudoku-savant could be compiled successfully

Test Execution Cycle Type:	Weekly

Case Automation Type:	Manual
Case State:	Ready
Feature:	sdk
target:	e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-832: perl program work in image	
Summary: A perl program could be executed and output correctly in image	
Steps: 1. Check if perl is installed in image and could run with "perl -v" 2. Prepare a perl program like followig test.pl 3. Run "perl test.pl" ######## $a = 9.01e+21 + 0.01 - 9.01e+21; print ("the value of a is ", $a, "\n"); $a = 9.01e+21 - 9.01e+21 + 0.01; print ("the value of a is ", $a, "\n"); ########	
Expected Results: The test.pl could run without problem	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Auto
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-833: shutdown system
Summary: verify that system can be shutdown by command
Steps: 1. boot system 2. launch terminal and run "shutdown -h now" or "poweroff"
Expected Results: System can be shutdown successfully

Test Execution Cycle Type:	Sanity
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, mpc8315e-rdb, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-834: reboot system	
Summary: verify that system can boot by command	
Steps: 1. boot system 2. launch terminal and run "reboot"	
Expected Results: System can reboot successfully	
Test Execution Cycle Type:	Sanity
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-835: adjust date and time
Summary: adjust date and time

Steps:
 	
1.launch terminal and run "date -R" to check current system time
2.adjust Date&Time by these commands:
For date command from coreutils, for example the sdk image use coreutils, you should use following syntax:
$ date -s "10:00:00 20100809"
$ date -R
$ Mon, 09 Aug 2010 10:00:00 +0000
For date command in busybox, for example the sato image use busybox, you should use following syntax:
$ date "080910002010"
$ date -R
$ Mon, 09 Aug 2010 10:00:00 +0000
3. check date with "date -R" and the time shown on matchbox-panel

Expected Results:

System time should be adjust to what you specified

Test Execution Cycle Type:	Weekly
Case Automation Type:	Auto
Case State:	Ready
Feature:	system usage
target:	e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-836: switch among multi applications and desktop
Summary: switch among multi applications and desktop
Steps: 1. launch several applications(like contacts, file manager) 2. launch terminal 3. switch among multi applications and desktop 4. close applications Note: The case is for sato image only.
Expected Results: 1. user could switch among multi applications and desktop

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	e-menlow, blacksand, beagleboard, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk
Last Result	**Not Run**

Test Case TC-837: vncserver for target
Summary: Check if vncserver setup work in target and vnc client could connect it
Steps: 1. Check if x11vnc is installed in target 2. Run command "x11vnc -display :0.0", check the ip address of the target 3. On a client, run command "vncviewer $ip_address_of_target:0"
Expected Results: A virtual X desktop of target should be pop-up on the client

Test Execution Cycle Type:	Weekly

Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemumips, e-menlow, blacksand, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk
Last Result	**Not Run**

Test Case TC-838: file manager	
Summary: file manager	
Steps: 1.launch file manager from application panel 2.view folder/file in file manager 3.copy and paste folder/file in file manager Note: The test is only for sato image	
Expected Results: 1.folder and file could be listed in file browser with different display mode	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	e-menlow, blacksand, beagleboard, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk
Last Result	**Not Run**

Test Case TC-839: system dmesg log check	
Summary: check if there is error in dmesg after system boot up	
Steps: 1. boot system and run command "dmesg"	
Expected Results: No error message in dmesg	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest

image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-840: usb mount	
Summary: verify that system can mount plugged usb automatically	
Steps: 1. boot system 2. plug usb stick	
Expected Results: 1. system notify that usb stick is accessible	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-841: usb read files	
Summary: verify that system can read files from usb	
Steps: 1. boot system 2. plug usb stick 3. view files in usb by file browser 4.copy some files from usb to local hardware	
Expected Results: 1. view/copy successfully	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-842: usb umount

Summary: verify that system can unmout usb automically	
Steps: 1. boot system 2. plug usb stick 3. view files in usb by file browser 4.unplug usb	
Expected Results: 1. usb direcoty in file browser automatically missed	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-843: usb write files	
Summary: verify that system can write files to usb	
Steps: 1. boot system 2. plug usb stick 3. create files in usb 4.copy some files from local hardware to usb	
Expected Results: 1. create/copy successfully	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-844: file copy by scp
Summary: check if file can be copied from remote machine to device by scp
Steps:

1. check avahi is install and started 2. get system IP and try "scp file $IP:/home/root" from remote machine (file >= 500M for real HW, file>=5M for QEMU)
Expected Results: File can be copied from remote machine to device by scp

Test Execution Cycle Type:	Sanity
Case Automation Type:	Auto
Case State:	Ready
Feature:	connectivity
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-845: connman launch after boot
Summary: After system booted, the connmand daemon should be launched
Steps: 1. boot system 2. "ps |grep connmand" 3. check if there is a thread named connmand in background
Expected Results: There should be one thread named connmand in background

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	connectivity
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk
Last Result	**Not Run**

Test Case TC-846: ethernet enabled in connman
Summary: After system boot, ethernet can get IP address with connman
Steps: 1. boot system with network cable plugged in 2. "ps |grep connmand" if connmand is started 3. "ifconfig" check ethernet could get IP address and ping the address from remote machine
Expected Results:

Ethernet interface can get IP via connman

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	connectivity
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk
Last Result	**Not Run**

Test Case TC-847: only one connmand in background
Summary: there should be no more than one connmand in background
Steps: 1. boot system 2. "ps |grep connmand" 3. the connmand should be in background 4. run command "connmand" 5. check if the second connmand can be generated
Expected Results: There will be only one connmand instance in background

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	connectivity
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk
Last Result	**Not Run**

Test Case TC-848: remote access by ssh
Summary: check if the device can be accessed remotely by ssh
Steps: 1. check avahi is install and started 2. get system IP and try "ssh $IP" from remote machine
Expected Results: it is ok to access system by ssh from remote machine

Test Execution Cycle Type:	Sanity
Case Automation	Auto

Type:	
Case State:	Ready
Feature:	connectivity
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-849: ethernet static ip set in connman	
Summary: we could set static ip for ethernet in connman	
Steps: 1. launch connman-properities 2. choose ethernet device and set static ip for it. For example, in our internal network, we can set as following: ip address: 10.239.48.xxx Broadcast: 10.239.48.255 Mask: 255.255.255.0	
Expected Results: we can set static ip for ethernet device	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	connectivity
target:	e-menlow, blacksand, crownbay, sugarbay, jasperforest
image profile:	sato-sdk
Last Result	**Not Run**

Test Case TC-850: ethernet get IP in connman via DHCP	
Summary: ethernet device can get IP in connman via DHCP	
Steps: 1. Set static IP for ethernet device in connman 2. Check if ethernet device can work with static IP 3. Choose DHCP method for ethernet device 4. Check with ping if ethernet device get IP address via DHCP	
Expected Results: Ethernet device can get dynamic IP address via DHCP in connman	
Test Execution Cycle Type:	Fullpass

Case Automation Type:	Manual
Case State:	Ready
Feature:	connectivity
target:	e-menlow, blacksand, crownbay, sugarbay, jasperforest
image profile:	sato-sdk
Last Result	**Not Run**

Test Case TC-851: connman offline mode in connman-gnome	
Summary: change offline mode in comman-gnome can make all connection off	
Steps: 1. Launch connman-properties after system booting 2. choose "offline mode" and check the connection of all network interfaces	
Expected Results: All connection should be off after clicking "offline mode"	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	connectivity
target:	qemux86_32, qemux86_64, qemuarm, qemumips, e-menlow, blacksand, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk
Last Result	**Not Run**

Test Case TC-852: X server can start up with runlevel 5 boot	
Summary: check if X server can work well after system runlevel 5 booting	
Steps: 1. boot up system with default runlevel	
Expected Results: X server can start up well and desktop display has no problem	
Test Execution Cycle Type:	Sanity
Case Automation Type:	Auto
Case State:	Ready
Feature:	graphics
target:	qemux86_32, qemux86_64, qemuarm, qemumips, e-menlow, blacksand, beagleboard, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk
Last Result	**Not Run**

Test Case TC-853: qt application quicky	
Summary: quicky is a simple note-taking application with Wiki-style syntax and behaviour	
Steps: launch quicky and write something in quicky	
Expected Results: http://qt-apps.org/content/show.php/Quicky?content=80325	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	graphics
target:	e-menlow, blacksand, beagleboard, crownbay, sugarbay, jasperforest
image profile:	sato-sdk
Last Result	**Not Run**

Test Case TC-854: standby	
Summary: system can enter standby and resume from standby	
Steps: 1. boot system and launch terminal; check output of "date" and launch script "continue.sh" 2. echo "mem" > /sys/power/state 3. After system go into S3 mode, move mouse or press any key to make it resume 4. Check "date" and script "continue.sh" 5. Check if application in X can work as normal continue.sh as below: ################## #!/bin/sh i=1 while [0] do echo $i sleep 1 i=$((i+1)) done ##################	
Expected Results: screen should resume back and script can run continuously	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage

target:	e-menlow, blacksand, crownbay, sugarbay, jasperforest
image profile:	sato-sdk
Last Result	**Not Run**

Test Case TC-907: check CPU utilization after standby	
Summary: check CPU utilization after standby	
Steps: 1. Start up system 2. run "top" command and check if there is any process eating CPU time 3. make system into standby and resume it 4. run "top" command and check if there is any difference with the data before standby	
Expected Results: There should be no big difference before/after standby with "top"	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	crownbay, sugarbay
image profile:	sato, sato-sdk
Last Result	**Not Run**

Test Case TC-855: Test if LAN device works well after resume from suspend state	
Summary: Test if LAN device works well after resume from suspend state.	
Steps: 1. boot system and launch terminal 2. echo "mem" > /sys/power/state 3. After system go into S3 mode, move mouse or press any key to make it resume 4. check ping status	
Expected Results: ping should always work before/after standby	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	e-menlow, blacksand, crownbay, sugarbay, jasperforest
image profile:	sato-sdk
Last Result	**Not Run**

Test Case TC-856: Test if usb hid device works well after resume from suspend state	
Summary: Test if usb hid device works well after resume from suspend state.	
Steps: 1. boot system and launch terminal 2. echo "mem" > /sys/power/state 3. After system go into S3 mode, move mouse or press any key to make it resume 4. check usb mouse and keyboard	
Expected Results: usb mouse and keyboard should work	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	e-menlow, blacksand, crownbay, sugarbay, jasperforest
image profile:	sato-sdk
Last Result	**Not Run**

Test Case TC-895: disk space check	
Summary: There should be enough disk space for QEMU rootfs	
Steps: 1. Launch QEMU targets(with rootfs.ext3 file) 2. Check the output of command df 3. If there is less than 5M disk space available, we assume it a failure	
Expected Results: There should be enough disk space for QEMU targets	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips
image profile:	sato, sato-sdk
Last Result	**Not Run**

Test Case TC-896: click terminal icon on X desktop
Summary: terminal icon should work without problem on X desktop
Steps: 1. After system launch and X start up, click terminal icon on desktop

2. Check if only one terminal window launched and no other problem met	
Expected Results: there should be no problem after launching terminal	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemumips, e-menlow, blacksand, beagleboard, crownbay, sugarbay
image profile:	sato, sato-sdk
Last Result	**Not Run**

Test Case TC-897: Add multiple files in music player	
Summary: music player should be no problem when adding multiple files at same time	
Steps: 1. Launch music player 2. Add multiple files(5 files) in music player at same time	
Expected Results: music player should be OK with this action	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	e-menlow, blacksand, beagleboard, crownbay, sugarbay
image profile:	sato-sdk
Last Result	**Not Run**

Test Case TC-898: system shutdown with UNFS	
Summary: system shutdown with UNFS should work	
Steps: 1. Use UNFS to start QEMU targets 2. Run shutdown in QEMU targets	
Expected Results: QEMU shutdown with UNFS should work	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual

Case State:	Ready
Feature:	sdk
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips
image profile:	sato, sato-sdk
Last Result	**Not Run**

Test Case TC-899: no connman-gnome icon on desktop	
Summary: there should be no connman-gnome icon on desktop	
Steps: 1. Launch sato image 2. There should be no connman-gnome icon on desktop, and connman-properties should be only invoked by toolbar	
Expected Results: There should be no connman-gnome icon on desktop, and connman-properties should be only invoked by toolbar	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemumips, e-menlow, blacksand, beagleboard, crownbay, sugarbay
image profile:	sato, sato-sdk
Last Result	**Not Run**

Test Case TC-900: application contacts should work	
Summary: application contacts should work without problem	
Steps: 1. Make sure X is started up 2. Check if there is "contacts" icon on desktop and run it 3. Check if there is any error by checking the output of this action and dmesg log	
Expected Results: "contacts" launch should not cause any error	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemumips, e-menlow, blacksand, beagleboard, crownbay, sugarbay
image profile:	sato, sato-sdk
Last Result	**Not Run**

Test Case TC-902: x11vnc icon click for target	
Summary: Check if vncserver could work in target by clicking x11vnc icon	
Steps: 1. Check if there is a x11vnc icon in target 2. Click the x11vnc icon and check the ip address of the target 3. On a client, run command "vncviewer $ip_address_of_target:0"	
Expected Results: A virtual X desktop of target should be pop-up on the client	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemumips, e-menlow, blacksand, crownbay, sugarbay
image profile:	sato, sato-sdk
Last Result	**Not Run**

Test Case TC-908: RTLDLIST path check for ldd command	
Summary: check if the file set in RTLDLIST is valid	
Steps: 1. After system is up, check if the RTLDLIST variable in ldd command 2. The file path set in RTLDLIST should be valid	
Expected Results: check if the file set in RTLDLIST is valid	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato-sdk
Last Result	**Not Run**

Test Case TC-910: check bash in image
Summary: check if bash exists in image

Steps: 1. After system is up, check if bash command exists	
Expected Results: bash command should exist in image	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips, e-menlow, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, crownbay, sugarbay, jasperforest
image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-911: "Install/Remove Software" icon should work	
Summary: "Install/Remove Software" icon should work	
Steps: 1. After system is up, check if "Install/Remove Software" icon could work	
Expected Results: "Install/Remove Software" icon should work	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	system usage
target:	qemux86_32, qemux86_64, qemuarm, qemumips
image profile:	sato, sato-sdk
Last Result	**Not Run**

1.3 Test Suite : ADT

Test Case TC-857: gcc from ADT toolchain can build c program
Summary: gcc from ADT toolchain can build c program and run with qemu-${ARCH} command or in target image
Steps:

1. Install toolchain tarball and setup cross compile environment
2. compile following program test.c "${CC} test.c -o test -cc -lm"
3. run "test" with qemu-${ARCH} or run it into corresponding target image and check the output

Note: Currently, only i586_i586, x86-64_x86-64 and i586_$X(x is mips, arm and ppc) toolchain tarballs are covered in testing.

```
#########
#include <stdio.h>
#include <math.h>

double
convert(long long l)
{
  return (double)l;    // or double(l)
}

int
main(int argc, char * argv[])
{
  long long l = 10;
  double f;

  f = convert(l);
  printf("convert: %lld => %f\n", l, f);

  f = 1234.67;
  printf("floorf(%f) = %f\n", f, floorf(f));
  return 0;
}
#########
```

Expected Results:

executable binary test can run without problem

Test Execution Cycle Type:	Sanity
Case Automation Type:	Auto
Case State:	Ready
Feature:	sdk
target:	build_system
image profile:	
Last Result	**Not Run**

Test Case TC-858: g++ from ADT toolchain can build c program

Summary:

g++ from ADT toolchain can build c program and run with qemu-${ARCH} command or in target image

Steps:

1. Install toolchain tarball and setup cross compile environment
2. compile following program test.c "${CXX} test.c -o test -cc++ -lm"
3. run "test" with qemu-${ARCH} or run it in corresponding target image and check the output

Note: Currently, only i586_i586, x86-64_x86-64 and i586_$X(x is mips, arm and ppc) toolchain

tarballs are covered in testing.

#########
```
#include <stdio.h>
#include <math.h>

double
convert(long long l)
{
  return (double)l;    // or double(l)
}

int
main(int argc, char * argv[])
{
  long long l = 10;
  double f;

  f = convert(l);
  printf("convert: %lld => %f\n", l, f);

  f = 1234.67;
  printf("floorf(%f) = %f\n", f, floorf(f));
  return 0;
}
```
#########

Expected Results:

executable binary test can run without problem

Test Execution Cycle Type:	Sanity
Case Automation Type:	Auto
Case State:	Ready
Feature:	sdk
target:	build_system
image profile:	
Last Result	**Not Run**

Test Case TC-859: ADT toolchain could build cvs project

Summary:

ADT toolchain could build cvs project

Steps:

1. Install toolchain tarball and setup cross compile environment
2. Download cvs project, http://ftp.gnu.org/non-gnu/cvs/source/feature/1.12.13/cvs-1.12.13.tar.bz2
3. With the cross compile environment, run "./configure ${CONFIGURE_FLAGS}", "make", "make install DESTDIR=/opt/tmp"

Note: Currently, only i586_i586, x86-64_x86-64 and i586_$X(x is mips, arm and ppc) toolchain tarballs are covered in testing.

Expected Results:

cvs project could be compiled successfully with ADT toolchain

Test Execution Cycle Type:	Weekly

Case Automation Type:	Manual
Case State:	Ready
Feature:	sdk
target:	build_system
image profile:	lsb-sdk
Last Result	**Not Run**

Test Case TC-860: ADT toolchain could build iptables project	
Summary: iptables project could be compiled with ADT toolchain	
Steps: 1. Install toolchain tarball and setup cross compile environment 2. Download iptables project, http://netfilter.org/projects/iptables/files/iptables-1.4.11.tar.bz2 3. With the cross compile environment, run "./configure ${CONFIGURE_FLAGS}", "make", "make install DESTDIR=/opt/tmp" Note: Currently, only i586_i586, x86-64_x86-64 and i586_$X(x is mips, arm and ppc) toolchain tarballs are covered in testing.	
Expected Results: iptables could be compiled successfully	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	sdk
target:	build_system
image profile:	lsb-sdk
Last Result	**Not Run**

Test Case TC-861: ADT toolchain could build sudoku-savant project	
Summary: sudoku-savant could be compiled with ADT toolchain	
Steps: 1. Install toolchain tarball and setup cross compile environment 2. Download sudoku-savant project, http://downloads.sourceforge.net/project/sudoku-savant/sudoku-savant/sudoku-savant-1.3/sudoku-savant-1.3.tar.bz2 3. With the cross compile environment, run "./configure ${CONFIGURE_FLAGS}", "make", "make install DESTDIR=/opt/tmp" Note: Currently, only i586_i586, x86-64_x86-64 and i586_$X(x is mips, arm and ppc) toolchain tarballs are covered in testing.	
Expected Results: sudoku-savant could be compiled successfully	
Test Execution Cycle Type:	Weekly

Case Automation Type:	Manual
Case State:	Ready
Feature:	sdk
target:	build_system
image profile:	lsb-sdk
Last Result	**Not Run**

Test Case TC-862: unfs support for qemu target	
Summary: Check if unfs works for qemu target	
Steps: 1. Prepare a *rootfs.tar.bz2 image 2. Prepare a folder under poky directory as <rootfs-dir>, for example poky/temp 3. Run command "runqemu-extract-sdk *rootfs.tar.bz2 poky/temp" 4. Run command "runqemu nfs <kernel> <rootfs-dir>"	
Expected Results: QEMU target should be started with unfs	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	sdk
target:	qemux86_32, qemux86_64, qemuarm, qemuppc, qemumips
image profile:	sato, sato-sdk, lsb-sdk
Last Result	**Not Run**

1.4 Test Suite : Stress

Test Case TC-863: crashme for stress	
Summary: Run crashme in real hardware for stress testing	
Steps: 1. Get crashme from http://people.delphiforums.com/gjc/crashme.html 2. By following the setup steps on above URL, build crashme in target. 3. Run crashme for 24 hours	
Expected Results: target should not crash with the program	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual

Case State:	Ready
Feature:	stress
target:	beagleboard, jasperforest
image profile:	sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-864: helltest for stress	
Summary: Run helltest for stress in target	
Steps: 1. helltest is stress test suite, which does compiler test for hours 2. We download the test suite and run it for 24 hours	
Expected Results: helltest should not make target crash	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	stress
target:	jasperforest
image profile:	lsb-sdk
Last Result	**Not Run**

Test Case TC-912: ltp for stress	
Summary: Run ltp stress in real hardware for stress testing	
Steps: LTP download: http://sourceforge.net/projects/ltp/files/LTP%20Source/ltp-20101031/ltp-full-20101031.bz2/download build steps: refer to http://ltp.sourceforge.net Run steps: 1. Build LTP with toolchain or in sdk image 2. Copy LTP folder into target, for example, /opt/ltp. Modify script "testscripts/ltpstress.sh", set “lostat=1”, ”NO_NETWORK=1” 3. cd testscripts/ && ./ltpstress.sh 4. This stress case will run for 24 hours	
Expected Results: Check the result, target should not crash with the program.	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	stress

target:	beagleboard
image profile:	sato-sdk
Last Result	**Not Run**

1.5 Test Suite : Power/Performance

Test Case TC-865: boot time collection	
Summary: To collect boot time of clean installation, from grub to full desktop	
Steps: 1. Reboot testing device at least 3 times and do not plug anything while collecting boot time by stopwatcher: #reboot	
Expected Results: Provide average boot time and dmesg log	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	performance
target:	crownbay, sugarbay
image profile:	sato-sdk
Last Result	**Not Run**

Test Case TC-866: memory footprint	
Summary: collect data of the used/free memory	
Steps: With default installtion, launch terminal and type 'free' to read the used/free disk space	
Expected Results: Provide 'free' output	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	core
target:	crownbay, sugarbay
image profile:	sato-sdk

Last Result	**Not Run**

Test Case TC-867: powertop log	
Summary: collect powertop data	
Steps: 1. Run "powertop -d" and record output 2. Save the percentage of deepest C state(C3 or C2)	
Expected Results: Provide powertop output	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	core
target:	crownbay, sugarbay
image profile:	sato-sdk
Last Result	**Not Run**

Test Case TC-868: Idle power consumption	
Summary: Collect idle power consumption of target system	
Steps: 1. Use power meter to collect ilde power consumption of target system for 10 minutes 2. Save it and compare it with old data	
Expected Results: There should be no regression between old and new ilde power data	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	performance
target:	crownbay, sugarbay
image profile:	sato-sdk
Last Result	**Not Run**

Test Case TC-869: core build time for sato image
Summary:

collect the core build time for sato qemux86 image
Steps: 1. Perpare a system with following configuration CPU: 4-core * 2-threads Intel(R) Core(TM) i7 CPU 860 @ 2.80GHz Memory: 4GB Harddisk: 1TB OS: Ubuntu 10.04 x86_64 Kernel: 2.6.32-21 2. Download poky tree and make sure all the source packages have been downloaded 3. Build a qemux86 sato image and collect the time
Expected Results: There should be no regression for build time

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	performance
target:	qemux86_32
image profile:	sato
Last Result	**Not Run**

1.6 Test Suite : Graphics

Test Case TC-870: Graphics ABAT
Summary: Yocto on SugarBay should pass Intel graphics ABAT testing

Steps:
 	
1. Download ABAT test suite from internal git repository, git clone
git://tinderbox.sh.intel.com/git/abat
2. Apply following patch to make it work on yocto environment
3. Run "./abat.sh" to run ABAT test

Expected Results:

All ABAT test should pass

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	bsp
target:	e-menlow, blacksand, crownbay, sugarbay
image profile:	sato, sato-sdk
Last Result	**Not Run**

Test Case TC-871: openarena - 3D

Summary: Run opernarena testing and compare the result with upstream graphics result
Steps: 1. Download and build openarena through phoronix test suite. first download a new phoronix from its website, then download the game in it. The openarena we use is v0.8.5. #### phoronix-test-suite list-tests phoronix-test-suite install openarena #### 2. Run the test suite with following command #### vblank_mode=0 openarena +exec pts +set r_mode -1 +set r_fullscreen 1 +set r_customWidth $VIDEO_WIDTH +set r_customHeight $VIDEO_HEIGHT #### The VIDEO_WIDTH and VIDEO_HEIGHT set the game's resolution，you can get current resolution by command "xrandr"
Expected Results: Compare the result of Yocto with upstream graphics

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	bsp
target:	sugarbay
image profile:	sato, sato-sdk
Last Result	**Not Run**

Test Case TC-872: urbanterror - 3D
Summary: Run urbanterror and compare the result of Yocto with upstream graphics
Steps: 1. download and build: This game also can get through phoronix-test-suite. 2. we should set some environments as following before test: ### OS_TYPE=Linux OS_ARCH=`uname -i` LOG_FILE=${LOGNOW_DIR}/${LOG_FILE} ### 3. Run urbanterror with following command ### vblank_mode=0 ./urbanterror +timedemo 1 +set demodone 'quit' +set demoloop1 'demo pts1; set nextdemo vstr demodone' +vstr demoloop1 +set r_customwidth $VIDEO_WIDTH +set r_customheight $VIDEO_HEIGHT ###
Expected Results: Get the FPS data of Yocto and compare it with upstream graphics

Test Execution Cycle Type:	Weekly
Case Automation	Manual

Type:	
Case State:	Ready
Feature:	bsp
target:	sugarbay
image profile:	sato, sato-sdk
Last Result	**Not Run**

Test Case TC-873: x11perf - 2D	
Summary: Get fps data of x11per running	
Steps: 1. Run "x11perf -aa10text" and "x11perf -rgb10text" 2. Get the FPS result and compare it with upstream graphics data on Sandybridge	
Expected Results: There should not be big regression between Yocto and upstream linux	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	bsp
target:	sugarbay
image profile:	sato, sato-sdk
Last Result	**Not Run**

1.7 Test Suite : Mulitimedia

Test Case TC-874: sound on/off	
Summary: check if sound can be turned on/off	
Steps: 1. copy amixer is installed 2. Run "amixer set Master on" to turn on audio device 3. Run "amixer set Master 64" to adjust to maxium volumn 4. Run "amixer set Speaker on" to turn on speaker 5. Run "amixer set Speaker 64" to adjust to maxium volumn 6. Run "amixer set Master off" to turn off audio device 7. Run "amixer set Speaker off" to turn off speaker	
Expected Results: Above commands can run without problem	
Test Execution Cycle Type:	Weekly

Case Automation Type:	Manual
Case State:	Ready
Feature:	multi-media
target:	e-menlow, blacksand, beagleboard, crownbay, sugarbay
image profile:	sato-sdk
Last Result	**Not Run**

Test Case TC-875: audio play (mp3)	
Summary: make sure music player cannot play mp3 format file	
Steps: 1. copy sample mp3 file to system 2. launch music player and make sure it cannot play the mp3 file	
Expected Results: mp3 file can not be played	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	multi-media
target:	e-menlow, blacksand, beagleboard, crownbay, sugarbay
image profile:	sato-sdk
Last Result	**Not Run**

Test Case TC-876: audio play (ogg)	
Summary: check if music player can play ogg format file	
Steps: 1. copy sample ogg file to system 2. launch music player can play the ogg file	
Expected Results: ogg file can be played without problem	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	multi-media
target:	e-menlow, blacksand, beagleboard, crownbay, sugarbay
image profile:	sato-sdk
Last Result	**Not Run**

Test Case TC-877: audio stop (ogg)	
Summary: check if music player can play ogg format file	
Steps: 1. copy sample ogg file to system 2. launch music player can play the ogg file 3. click "stop" button to stop playing 4. click "start" button to resume playing	
Expected Results: ogg file can be start/stop without problem	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	multi-media
target:	e-menlow, blacksand, beagleboard, crownbay, sugarbay
image profile:	sato-sdk
Last Result	**Not Run**

Test Case TC-878: audio play (wav)	
Summary: check if music player can play wav format file	
Steps: 1. copy sample wav file to system 2. launch music player can play the wav file	
Expected Results: wav file can be played without problem	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	multi-media
target:	e-menlow, blacksand, beagleboard, crownbay, sugarbay
image profile:	sato-sdk
Last Result	**Not Run**

Test Case TC-879: audio stop (wav)
Summary: check if music player can stop playing with wav format file
Steps: 1. copy sample wav file to system 2. launch music player can play the wav file

3. click "stop" button to stop playing 4. click "start" button to resume playing	
Expected Results: wav file can be start/stop without problem	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	multi-media
target:	e-menlow, blacksand, beagleboard, crownbay, sugarbay
image profile:	sato-sdk
Last Result	**Not Run**

Test Case TC-880: video play (mpeg)	
Summary: make sure video player cannot play mpeg format file	
Steps: 1. copy sample mpeg file to system 2. launch video player and make sure it cannot play the mpeg file	
Expected Results: mpeg file cannot be played	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	multi-media
target:	e-menlow, blacksand, beagleboard, crownbay, sugarbay
image profile:	sato-sdk
Last Result	**Not Run**

Test Case TC-881: video play (ogg)	
Summary: check if video player can play ogg format file	
Steps: 1. copy sample ogg file to system 2. launch video player can play the ogg file	
Expected Results: ogg file can be played without problem	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual

Case State:	Ready
Feature:	multi-media
target:	e-menlow, blacksand, beagleboard, crownbay, sugarbay
image profile:	sato-sdk
Last Result	**Not Run**

Test Case TC-882: video stop (ogg)	
Summary: check if video player can play ogg format file	
Steps: 1. copy sample ogg file to system 2. launch video player can play the ogg file 3. click "stop" button to stop playing 4. click "start" button to resume playing	
Expected Results: ogg file can be start/stop without problem	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	multi-media
target:	e-menlow, blacksand, beagleboard, crownbay, sugarbay
image profile:	sato-sdk
Last Result	**Not Run**

1.8 Test Suite : Compliance

Test Case TC-883: LTP subset test suite
Summary: LTP subset test suite
Steps: For real hardware, run following component, syscalls fs fsx dio io mm ipc sched math nptl pty admin_tools

timers
commands

For QEMU, run following component
syscalls
mm
ipc
sched
math
nptl
pty
admin_tools
commands

Run Instructions:
LTP download: http://sourceforge.net/projects/ltp/files/LTP%20Source/ltp-20110606/ltp-full-20110606.bz2/download

build steps: refer to http://ltp.sourceforge.net

Run steps:
1. Build LTP with toolchain or in sdk image
2. For QEMU, create the qemu target with "-m 512", which makes some memory stress cases pass. For some issues, we could only set 128M for qemuarm and 256M for qemumips.
3. Copy LTP folder into target, for example, /opt/ltp. Modify script "runltp", remove test suites not to be tested
4. Comment runtests/sched: hackbench, which is not suitable to run in emulators
5. Prepare a tmp folder under your ltp folder, for example, create a tmp folder under your ltp folder, like /opt/ltp/tmp
6. ./runltp -p -l result-M2-20101218.log -C result-M2-20101218.fail -d /opt/ltp/tmp &> result-M2-20101218.fulllog
   (assume you mount your LTP disk at /opt and create your own tmp dir at /opt/ltp/tmp)

Expected Results:

Check the result on wiki, https://wiki.yoctoproject.org/wiki/LTP_result, there should be no regression failure met.

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Semi-Auto
Case State:	Ready
Feature:	core
target:	qemuarm, qemuppc, qemumips, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, sugarbay
image profile:	sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-884: POSIX subset test suite

Summary:

Run subset test suite of POSIX test suite

Steps:

POSIX test suite download: http://sourceforge.net/projects/posixtest/files/posixtest/posixtestsuite-1.5.2/posixtestsuite-1.5.2.tar.gz/download
build: refer to http://posixtest.sourceforge.net/

Run steps:
1. Get POSIX test suite as above
2. Start target and copy test suite into it

3. For qemu, option "-m 512" should be added
4. Make sure below is uncommented from LDFLAGS file:
#-D_XOPEN_SOURCE=600 –lpthread –lrt –lm

5. For gcc 4.6, you need to add "-Wno-unused-but-set-variable -Wno-address" to CFLAGS in Makefile
6. Run following commands under POSIX test suite
run_tests SIG
run_tests SEM
run_tests THR
run_tests TMR
run_tests MSG
run_tests TPS
run_tests MEM

Expected Results:

Compare the test result on wiki, https://wiki.yoctoproject.org/wiki/Posix_result, there should be no more regression failures met.

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Semi-Auto
Case State:	Ready
Feature:	core
target:	qemuarm, qemuppc, qemumips, blacksand, beagleboard, mpc8315e-rdb, routerstationpro, sugarbay
image profile:	sato-sdk, lsb-sdk
Last Result	**Not Run**

Test Case TC-885: LSB subset test suite

Summary:

Run LSB subset test suite in target

Steps:

1. Get LSB image and start the image(if it is QEMU) with option "-m 512M"
2. Get the LSB test suite or run script creat-lsb-image under poky source directory "scripts/creat-lsb-image"
3. Setup environment for lsb image in target with script LSB_Setup.sh, it could be found under poky source directory "/meta/recipes-extended/lsb/lsbsetup/LSB_Setup.sh"
4. Select LSB test items in LSB web interface and run them

Expected Results:

Check the result on wiki, https://wiki.pokylinux.org/wiki/index.php?title=LSB_result&action=edit&redlink=1. No regression failures should be met.

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	core
target:	blacksand, mpc8315e-rdb, sugarbay
image profile:	lsb-sdk
Last Result	**Not Run**

1.9 Test Suite : Core Build System

Test Case TC-894: Init scripts	
Summary: Provide an image/recipe skeleton as a canonical example. Check if can be built and run correctly	
Steps: 1. Build image from poky source, check if skeleton script and skeleton-test can be built into the image a. download poky source b. modify the line IMAGE_FEATURES += "apps-console-core ${SATO_IMAGE_FEATURES}" to IMAGE_FEATURES += "apps-console-core ${SATO_IMAGE_FEATURES}} service" in meta/recipes-sato/images/core-image-sato.bb (for sato image) or core-image-sato-sdk.bb (for sato-sdk image) c. $ source oe-init-build-env add line “<POKY_BASE>/meta-skeleton \” to conf/bblayer.conf d. build the image e. boot up the image, check the skeleton and skeleton-test should be in right place /etc/init.d/skeleton /usr/sbin/skeleton-test 2. Verify the basic function of skeleton. Check if skeleton script can start/stop the skeleton-test daemon.	
Expected Results: Init scripts can be built and run correctly	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
image profile:	
Last Result	**Not Run**

Test Case TC-920: Minimal image
Summary:

Check if the minimal image can be built and run correctly.
Steps: 1. Build a minimal image from poky source by following the wiki: https://wiki.yoctoproject.org/wiki/Minimal_Image 2. Check the size of the image. It should take less than 5M disk space after extraction. 3. Verify the basic function of the image. Run “busybox –list” to get the commands list. Check if these commands can run correctly.
Expected Results: The minimal image can be built and run correctly.

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
Last Result	**Not Run**

Test Case TC-921: Share gcc work directories
Summary: This feature make gcc use the shared source directory during the different building. Check if this feature can work for gcc 4.5.1 and gcc 4.6.0.
Steps: 1. Download the poky source and set build environment. 2. For gcc 4.5.1, add 2 lines to conf/local.conf : GCCVERSION ?= "4.5.1" SDKGCCVERSION ?= "4.5.1" For gcc 4.6.1, there is no need to add these 2 lines to conf/local.conf 3. Run bitbake command as below: bitbake gcc-cross bitbake gcc-cross gcc-cross-initial gcc-cross-intermediate -c clean bitbake gcc-crosssdk bitbake gcc-runtime bitbake libgcc bitbake gcc-cross-canadian-arm (for arm arch) bitbake gcc-cross-canadian-powerpc (for ppc arch) bitbake gcc-cross-canadian-mips (for mips arch) 4. Run "bitbake core-image-minimal", "bitbake core-image-sato", "bitbake core-image-sato-sdk" to build images. Verify the basic function of the images.
Expected Results: After step3, you can check the tmp/work-shared/gcc-4.6.0 or tmp/work-shared/gcc-4.5.1 should in the build directory. Check the time of build process and the disk space usage of tmp/work-shared/gcc-version sub-directory. The images should be built and can work correctly.

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky

target:	build_system
Last Result	**Not Run**

Test Case TC-922: ccache as native tool	
Summary: ccache - a fast C/C++ compiler cache.	
Steps: 1. Make sure the native ccache is not installed on local machine and compile 'less' bbfile without native ccache support. bitbake ccache-native -c clean bitbake less -c clean bitbake less -c compile Check the compile log under .../tmp/work/mips-poky-linux/less-443-r0/temp/log.do_compile 2. Build native tool 'ccache' bitbake ccache-native Check the ccache-native installed location ..tmp/sysroots/x86_64-linux/usr/bin/ccache 3. Compile less bbfile again with native ccache support bitbake less -c clean bitbake less -c compile Check the compile with ccache log under .../tmp/work/mips-poky-linux/less-443-r0/temp/log.do_compile. The native ccache should be used when compiled.	
Expected Results: The ccache-native should be built successfully and be installed to the correct location. The ccache-navive will be used when compile file.	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
Last Result	**Not Run**

Test Case TC-923: PAM support	
Summary: Check the Yocto should support PAM (Pluggable Authentication Module)	
Steps: 1. Build a sato-sdk image from poky source with PAM support by following the wiki: https://wiki.yoctoproject.org/wiki/PAM_Integration 2. Refer to https://wiki.yoctoproject.org/wiki/PAM_Integration , check the commands 'dropbear', 'login', 'passwd', 'useradd', 'su' can work correctly with PAM support and verify the function of PAM.	
Expected Results: The commands which have PAM support should run correctly and the function of PAM should work without problems.	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual

Case State:	Ready
Feature:	poky
target:	build_system
Last Result	**Not Run**

Test Case TC-886: kernel interactive targets	
Summary: Check if yocto can support kernel interactive target build	
Steps: 1. download yocto source tree 2. prepare yocto build environment 3. Run "bitbake linux-yocto -c menuconfig" 4. Check if a new bash terminal pop up and menuconfig can be triggered	
Expected Results: menuconfig for kernel can be triggered with yocto build command	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
image profile:	
Last Result	**Not Run**

Test Case TC-887: KVM enabled with qemu	
Summary: qemu can be started with KVM enabled	
Steps: 1. build a kernel with KVM enabled 2. Start qemu with option "kvm" with runqemu 3. Check if qemu starts up and if kvm_intel is used 4. If kvm_intel is not used when starting qemu, it will shows 0 in "Used by" column when you run "lsmod | grep kvm_intel"	
Expected Results: KVM enabled with qemu	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
image profile:	
Last Result	**Not Run**

Test Case TC-888: non-GPLv3 build check	
Summary: Check if non-GPLv3 build could pass and it does not has any GPLv3 packages installed	

Steps:
 	
1. Set following sentences in local.conf to GPLv3
#####
INCOMPATIBLE_LICENSE = "GPLv3"
#####
2. Build core-image-minimal and core-image-basic
3. Start up target after build is finished
4. Run following script to check if any GPLv3 packages installed
 	
####################
#!/bin/sh
 	
temp=`mktemp`
rpm -qa > $temp
ret=0
 	
for i in `cat $temp`
do
  rpm -qi $i | grep License | grep -i gplv3 > /dev/null 2>&1
  if [$? -eq 0]; then
  license=`rpm -qi $i | grep License | awk -F"License:" '{print $2}'`
  echo "package $i has inconsistent license: $license"
  ret=1
  fi
done
 	
rm -rf $temp
exit $ret
####################	

Expected Results: non-GPLv3 build pass and no GPLv3 packages installed in the image	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
image profile:	
Last Result	**Not Run**

Test Case TC-889: yocto build in Fedora 15
Summary: Build latest yocto in x86_64 Fedora 15 host
Steps: 1. By following the yocto handbook, download latest yocto source 2. Build core-image-minimal on Fedora 15

Expected Results: Yocto build should pass on Fedora 15	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
image profile:	
Last Result	**Not Run**

Test Case TC-890: yocto build in OpenSuse 11.4	
Summary: Build latest yocto in x86_64 OpenSuse 11.4	
Steps: 1. By following the yocto handbook, download latest yocto source 2. Build core-image-minimal on OpenSuse 11.4	
Expected Results: Build should pass on OpenSuse 11.3	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
image profile:	
Last Result	**Not Run**

Test Case TC-891: yocto build in Ubuntu 11.04	
Summary: Build latest yocto in x86_64 Ubuntu 11.04	
Steps: 1. By following the yocto handbook, download latest yocto source 2. Build core-image-minimal on Utuntu 11.04	
Expected Results: Yocto build should pass on Utuntu 10.04	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky

target:	build_system
image profile:	
Last Result	**Not Run**

Test Case TC-892: yocto build in KVM	
Summary: Build yocto in KVM should work	
Steps: 1. Setup a VM environment with KVM enabled, for example, RHEL6 2. Prepare a VM for yocto build testing, for example, OpenSuse 11.3 3. By following the yocto handbook, download latest yocto source into the VM 4. Build core-image-minimal in the VM	
Expected Results: Yocto build in VM should work same as in real host	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
image profile:	
Last Result	**Not Run**

Test Case TC-893: sstate work on local host	
Summary: Check if sstate could work with local cache	
Steps: 1. Follow the wiki steps to setup a sstate cache on local machine, https://wiki.yoctoproject.org/wiki/Enable_sstate_cache 2. Prepare another yocto source directory and set the SSTATE_DIR the cache you setup in step 1) 3. Run poky build, for example, "bitbake core-image-minimal". You should note following things if sstate works: ######## NOTE: Preparing runqueue NOTE: Executing SetScene Tasks NOTE: Running setscene task 118 of 155 (virtual:native:/home/lulianhao/poky-build/edwin/poky/meta/recipes-devtools/pseudo/pseudo_git.bb:do_populate_sysroot_setscene) NOTE: Running setscene task 119 of 155 (/home/lulianhao/poky-build/edwin/poky/meta/recipes-devtools/quilt/quilt-native_0.48.bb:do_populate_sysroot_setscene #########	
Expected Results: sstate should work and reduce build time	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual

Case State:	Ready
Feature:	poky
target:	build_system
image profile:	
Last Result	**Not Run**

Test Case TC-901: gcc set to 4.5.1 for core build	
Summary: gcc related options should be set to 4.5.1 for 4.5.1 build	
Steps: 1. Download poky source and prepare the build environment 2. Set GCCVERSION and SDKGCCVERSION to 4.5.1 in meta/conf/distro/include/tcmode-default.inc 3. Run "bitbake -s | grep gcc" and check the output, all gcc related options should be set to 4.5.1	
Expected Results: all gcc related options should be set to 4.5.1	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	
image profile:	
Last Result	**Not Run**

Test Case TC-924: btrfs format image build	
Summary: btrfs format image could be built out	
Steps: 1. set IMAGE_FSTYPES = "btrfs" in local.conf 2. build a core-image-minimal image, the image should be btrfs format	
Expected Results: btrfs format image could be built out	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
Last Result	**Not Run**

Test Case TC-925: lib64-zlib lib32-zlib build

Summary: lib64-zlib lib32-zlib build should pass with multilib enabled	
Steps: 1. Prepare poky build environment 2. by following https://wiki.pokylinux.org/wiki/Multilib, set local.conf to enable multilib build 3. build lib64-zlib and lib32-zlib, which should build pass without error	
Expected Results: lib64-zlib lib32-zlib build should pass with multilib enabled	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
Last Result	**Not Run**

Test Case TC-926: lib32 sato-sdk image build	
Summary: lib32 sato-sdk image could be built out with multilib support	
Steps: 1. Prepare poky build environment 2. by following https://wiki.pokylinux.org/wiki/Multilib, set local.conf to enable multilib build 3. with rpm set for package format, build lib32 core-sato-sdk image 4. after build finished, start up the image and you should find a lib32 folder	
Expected Results: lib32 sato-sdk image could be built out with multilib support	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
Last Result	**Not Run**

Test Case TC-927: lib32 lsb-sdk image build	
Summary: lib32 lsd-sdk image should be built out with multilib support	
Steps: 1. Prepare poky build environment 2. by following https://wiki.pokylinux.org/wiki/Multilib, set local.conf to enable multilib build 3. with rpm set for package format, build lib32 core-lsb-sdk image 4. after build finished, start up the image and you should find a lib32 folder	
Expected Results:	

lib32 lsd-sdk image should be built out with multilib support

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
Last Result	**Not Run**

Test Case TC-928: lib64 sato-sdk image build
Summary: lib64 sato-sdk image should be built out with multilib support
Steps: 1. Prepare poky build environment 2. by following https://wiki.pokylinux.org/wiki/Multilib, set local.conf to enable multilib build 3. with rpm set for package format, build lib64 core-lsb-sdk image 4. after build finished, start up the image and you should find a lib64 folder
Expected Results: lib64 sato-sdk image should be built out with multilib support

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
Last Result	**Not Run**

Test Case TC-929: lib64 lib32 build for ipk
Summary: lib64 lib32 build should work with ipk format
Steps: 1. Prepare poky build environment 2. by following https://wiki.pokylinux.org/wiki/Multilib, set local.conf to enable multilib build 3. with ipk set for package format, build lib32 and lib64 core-sato-sdk image 4. after build finished, start up the image and you should find a lib32 or lib64 folder according to the image name, and ipk format is used for packages
Expected Results: lib64 lib32 build should work with ipk format

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky

target:	build_system
Last Result	**Not Run**

Test Case TC-930: lib64 lib32 build for deb	
Summary: lib64 lib32 build should work with deb format	
Steps: 1. Prepare poky build environment 2. by following https://wiki.pokylinux.org/wiki/Multilib, set local.conf to enable multilib build 3. with deb set for package format, build lib32 and lib64 core-sato-sdk image 4. after build finished, start up the image and you should find a lib32 or lib64 folder according to the image name, and deb format is used for packages	
Expected Results: lib64 lib32 build should work with deb format	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
Last Result	**Not Run**

Test Case TC-931: bitbake-layers show_layers	
Summary: show_layers could show current layers	
Steps: 1. prepare poky build environment 2. add meta-rt into bblayer.conf 3. run "bitbake-layers show_layers", it should show the layers defined in bblayer.conf	
Expected Results: show_layers could show current layers	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
Last Result	**Not Run**

Test Case TC-932: bitbake-layers show_overlayed
Summary: overlayed recipes should be shown with bitbake-layers

Steps: 1. prepare poky build environment 2. copy a recipe from meta layer into meta-yocto, for example, /home/jxu49/osel/poky/meta/recipes-graphics/clutter/clutter-1.6_1.6.14.bb 3. run "bitbake-layers show_overlayed", it should report clutter is overlayed by meta-yocto	
Expected Results: overlayed recipes should be shown with bitbake-layers	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
Last Result	**Not Run**

Test Case TC-933: bitbake-layers show_appends	
Summary: bitbake-layers show_appends should list bbappend files and recipe files they apply to	
Steps: 1. prepare poky build environment 2. run "bitbake-layers show_appends", it should list bbappend files and recipe files they apply to	
Expected Results: bitbake-layers show_appends should list bbappend files and recipe files they apply to	
Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
Last Result	**Not Run**

Test Case TC-934: bitbake-layers flatten	
Summary: bitbake-layers flattens layer configuration into a separate output directory	
Steps: 1. prepare poky build environment 2. create a folder, for example, test 3. run "bitbake-layers flatten test", all contents of all layers should be moved into the test folder, with any bbappends appended to corresponding recipes 4. check if bbappends take effect, for example, check if test/recipes-bsp/formfactor/formfactor_0.0.bb has the code defined in meta-yocto/recipes-bsp/formfactor/formfactor_0.0.bbappend	
Expected Results:	

bitbake-layers flattens layer configuration into a separate output directory

Test Execution Cycle Type:	Fullpass
Case Automation Type:	Manual
Case State:	Ready
Feature:	poky
target:	build_system
Last Result	**Not Run**

1.10 Test Suite : BSP specific

Test Case TC-903: RTC
Summary: Check if RTC(Real Time Clock) can work correctly
Steps: 1. Read time from RTC registers. root@localhost:/root> hwclock -r Sun Mar 22 04:05:47 1970 -0.001948 seconds 2. Set system current time root@localhost:/root> date 062309452008 3. Synchronize the system current time to RTC registers root@localhost:/root> hwclock -w 4. Read time from RTC registers root@localhost:/root> hwclock -r 5. Reboot target and read time from RTC again.
Expected Results: Can read and set the time successful

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready

Feature:	bsp
target:	beagleboard, mpc8315e-rdb
image profile:	sato-sdk
Last Result	**Not Run**

Test Case TC-904: Watchdog	
Summary: Check if watchdog can reset the target system	
Steps: 1. Check if watchdog device exist in /dev/ directory 2. Run command “echo 1 > /dev/watchdog” and wait for 60s. Then the target will reboot.	
Expected Results: The watchdog device exist in /dev/ directory and can reboot the target.	
Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	bsp
target:	beagleboard, routerstationpro
image profile:	sato-sdk
Last Result	**Not Run**

Test Case TC-905: SATA
Summary: Test general use of SATA device on target, like mount, umount, read and write.
Steps: 1. Run “fdisk” command to create partition on SATA disk. 2. Mount/Umount mke2fs /dev/sda1 mount -t ext2 /dev/sda1 /mnt/disk umount /mnt/disk 3. Read/Write (filesystem)

touch /mnt/disk/test.txt

echo “abcd” > /mnt/disk/test.txt

cat /mnt/disk/test.txt

4. Read/Write (raw)

dd if=/dev/sda1 of=/tmp/test bs=1k count=1k

This command will read 1MB from /dev/sda1 to /tmp/test

Expected Results:

The SATA device can mount, umount, read and write

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	bsp
target:	mpc8315e-rdb
image profile:	sato-sdk
Last Result	**Not Run**

Test Case TC-906: I2C/EEPROM

Summary:

Check if target can support EEPROM

Steps:

1. Check eeprom device exist in /sys/bus/i2c/devices/

2. Run "hexdump eeprom" command

root@mpc8315e-rdb:/sys/bus/i2c/devices/1-0051> hexdump eeprom

0000000 9210 0b02 0211 0009 0b52 0108 0c00 3c00

0000010 6978 6930 6911 208c 7003 3c3c 00f0 8381

Expected Results:

Hexdump can read data from eeprom

Test Execution Cycle Type:	Weekly
Case Automation Type:	Manual
Case State:	Ready
Feature:	bsp
target:	mpc8315e-rdb

image profile:	sato-sdk
Last Result	**Not Run**
